## >INTRODUCTION

Founded in 1970, Astore continues to offer cost effective thermoplastic pipe, fittings and valves in both ABS and PVC-U to a wide range of market sectors.

Our range of fully matched systems are ideally suited for a variety of applications where lightweight, high quality and durable pipework is required.

As an indication of commitment to quality manufacture, Astore PVC-U and ABS are UK Water Regulations Advisory Scheme (WRAS) approved.

Furthermore, the Italian Institute of Plastics (IIP) has granted certificates of conformity in compliance with UNI EN ISO 9002 (Certificate No 354).

Astore PVC-U Premium pipe is listed within 'List of Approved products published by the DWI' Astore manufactures two ranges of PVC-U pipe (Optima & Premium). Only Premium pipe is fully approved to Regulation 31.

Astore products are available via a network of approved stockists across the UK.

Astore products have been used for the conveyance of a range of fluids in the following market sectors for many years;

AQUALCULTURE

FOOD & BEVERAGE

WATER & WASTEWATER TREATMENT

POOLS & SPAS

IRRIGATION

# >INTRODUCTION

## STANDARDS AND APPROVALS

### Astore products are manufactured in accordance with the following standards:

Astore is an ISO 14001 certified company.

#### Astore PVC-U pipe:

Imperial BS EN 1452-2

Metric DIN 8061-2 KIWA 49 (REV.1)

Astore PVC-U is listed in the 'list of approved products' published by the DWI.

#### Astore PVC-U fittings:

Imperial BS 4346 Part 1

Threaded BS 21, ISO R7 DIN 2999, ISO UNI 228/1

Metric ISO 727, EN 1452, KIWA 54

PVC-U fittings are UK Water Regulations Advisory Scheme approved and listed (Certificate 1403092).

#### Astore ABS pipe: BS 5391 Part 1

#### Astore ABS fittings: BS 5392 Part 1

Astore ABS fittings are UK Water Regulations Advisory Scheme approved and listed (Certificate 1212154).

### Unrivalled Third Party Standards and Approvals

### Fast, Simple and High Integrity Jointing

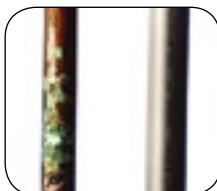

Solvent welding is a simple process which produces a permanent joint of strength equal to, or exceeding, the pipe itself. No special tools, equipment or hot works permits are required.

- No electricity required
- No flame or combustible gas bottles required on-site
- No site downtime due to electricity shut down
- No hot works permits or need for site segregation
- Permanent, secure jointing
- No special tools needed
- Easy transition to other systems
- Reduced installation time
- Reduced installation costs
- Light and easy to handle

### Lightweight

Astore is approximately one-sixth of the weight of steel pipework. Therefore, Astore is much easier to handle, especially during installation on-site.

Copper pipe vs ABS pipe

Copper vs ABS

Steel pipe

Plastic pipe

### Corrosion and Limescale Resistant

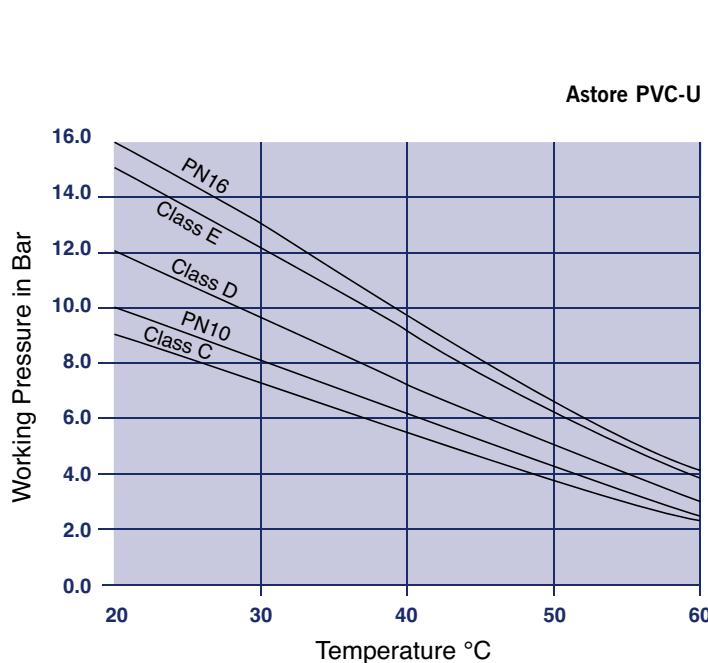

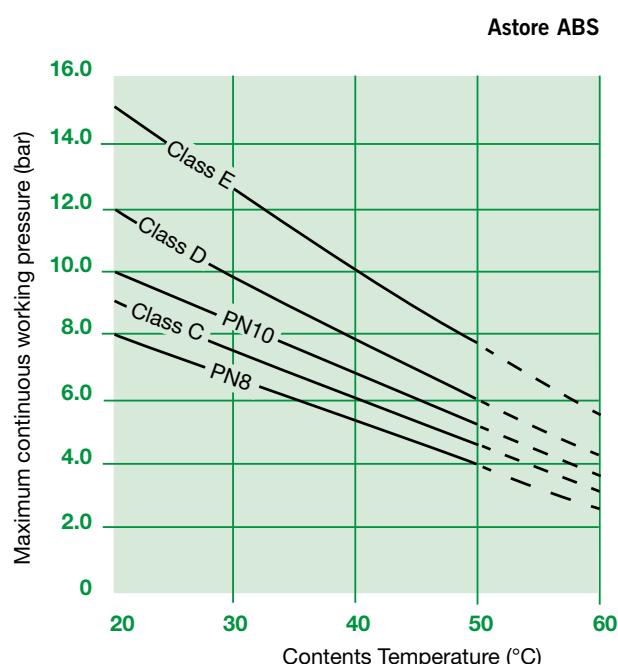

Both limescale and corrosion can become a problematic feature of any metal-based pipework system. However, the smooth bore lining of Astore pipework prohibits any limescale build-up throughout the life of the system, maintaining consistent flow rates.

Furthermore, Astore is extremely corrosion resistant even with a range of moderate chemicals which can mean less maintenance costs and no costly system replacement.

# >TECHNICAL INFORMATION

## Maximum pressure/temperature relationship

When temperature of contents exceeds 20°C the working pressure of the system must be reduced accordingly (see table below).

## Fittings

The calculation of pressure drop in fittings is more complex but calculations can be made for equivalent lengths of straight pipe using the formula  $E=F \times D$  where:

E = equivalent pipe length (metres)

F = fittings constant (see table below)

D = fitting internal diameter (mm)

To calculate the total pressure drop in the system, the equivalent straight pipe lengths for fittings is then added to the total straight pipe length to obtain the total drop.

## Fittings constant

90° elbow	0.03
45° elbow	0.01
90° tee - straight through	0.01
90° tee - side branch	0.06
90° bend	0.01
45° bend	0.01
Reducing bush (per size reduction)	0.015
Butterfly valves	0.13
Diaphragm valves	0.23
Check valves	0.05

The values are included as a guide to aid calculation of overall system performance and should not be used in isolation.

## Flow calculations

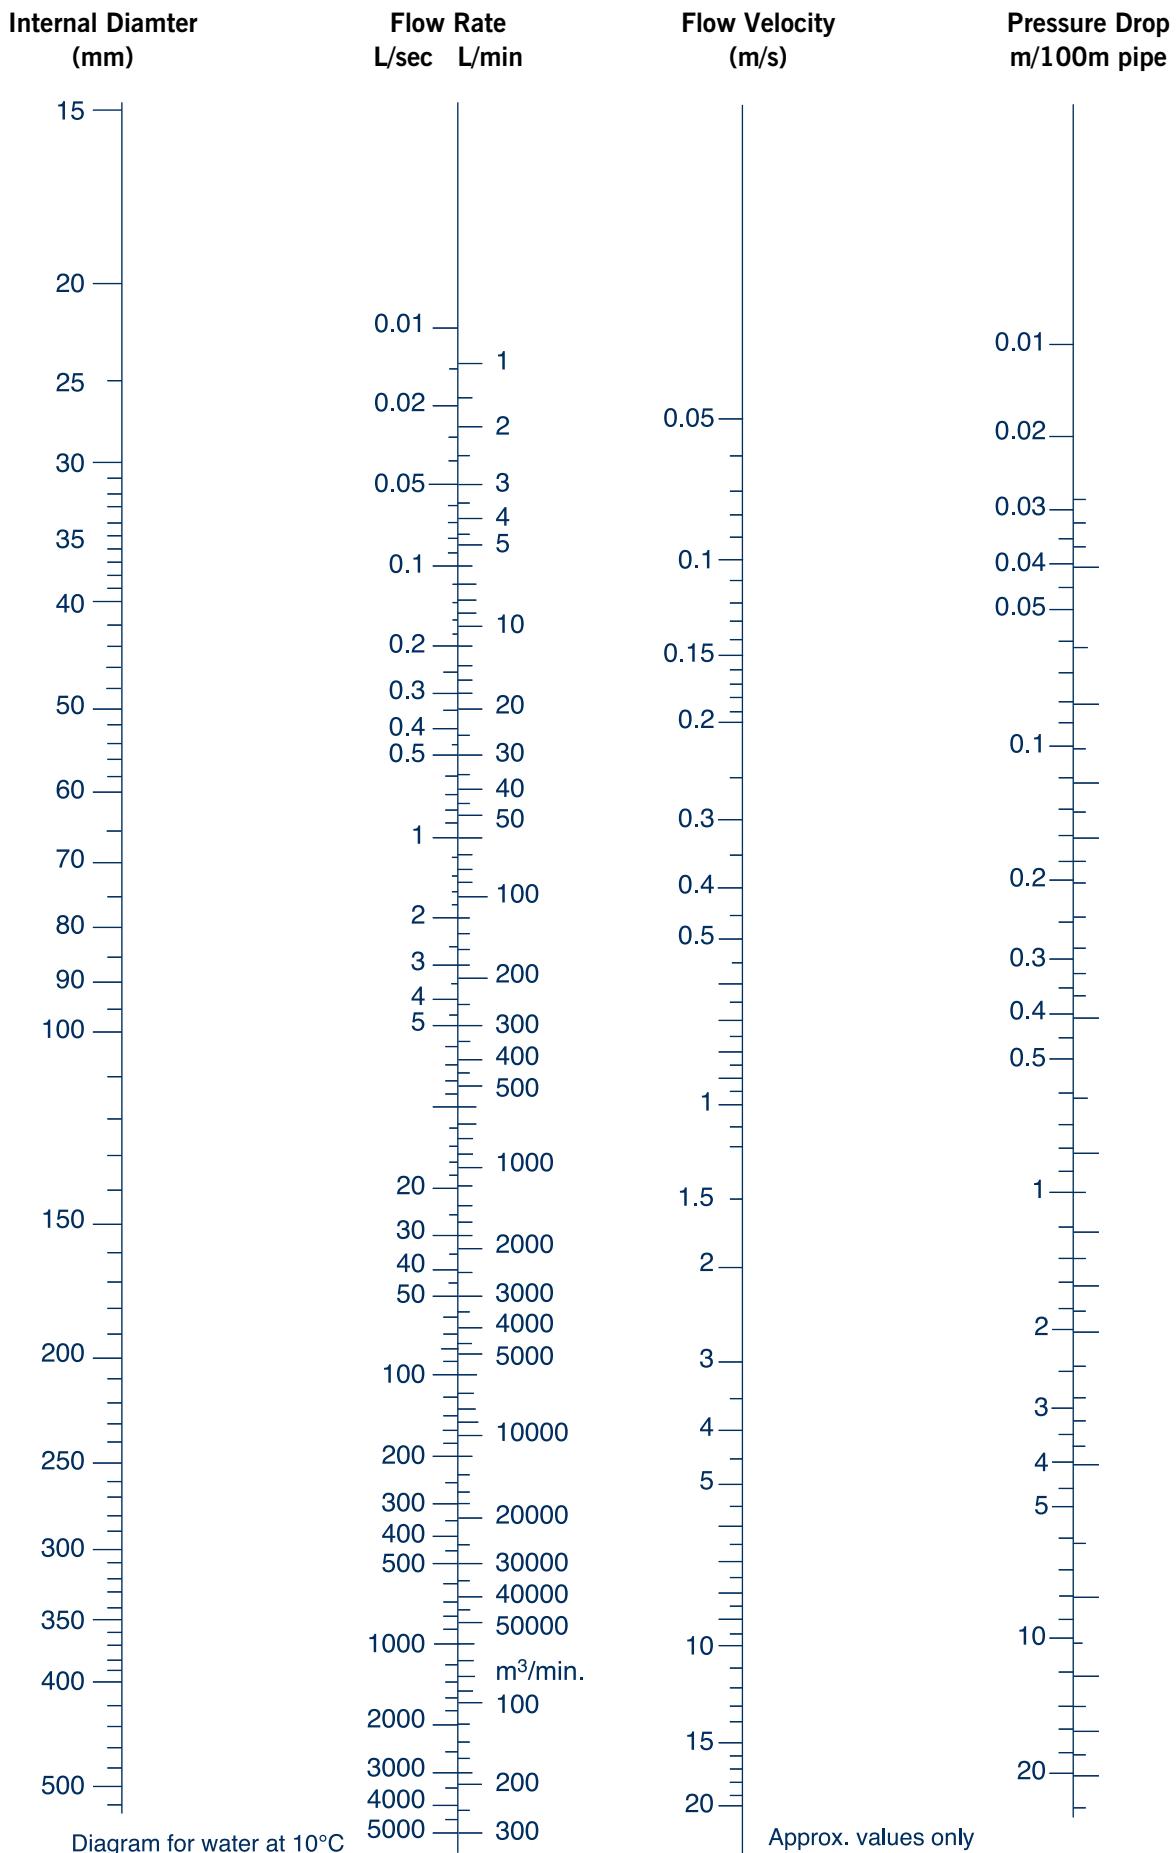

Pressure drop due to friction in pipes conveying water can be determined using the Flow Nomogram on page 7.

The pressure drop at a given flow rate can be determined as follows:

1. Obtain the internal diameter of the pipe to be used  
(Can be found in the pipe dimensional section on Page 21-22):
2. Mark this diameter on Scale A.
3. Mark the required flow rate in litres per second on Scale B.
4. Draw a straight line connecting the points on Scales A and B and extend this to Scales C and D.
5. The velocity of flow in metres per second is determined from the intersection with Scale C.
6. The frictional head loss in metres per 100 metres of pipe can then be read off Scale D.

## >TECHNICAL INFORMATION

### FLOW NOMOGRAM

# >TECHNICAL INFORMATION

## Pipe routing

Systems installed above ground should be designed such that there are sufficient changes in direction to accommodate expansion or contraction. The support method described below will ensure that the pipework can move axially, without snaking. Utilise all available pipe flexibility. Do not place clips too close to changes in direction.

## Calculating expansion and contraction

Temperature variations in a pipework system will increase or decrease the length of each pipe. This is the result of temperature changes in the fluid carried and also from ambient temperature variations. The rate of expansion or contraction of pipework is dependent on its length, its coefficient of expansion and the temperature difference.

Increase/decrease in pipe length is given by the formula:

$$\text{Expansion} = L \times \alpha \times \Delta T$$

where:  $L$  = length (mm)

$\alpha$  = coefficient of linear expansion

$\Delta T$  = temperature difference of the pipe ( $^{\circ}\text{C}$ )

The coefficient of linear expansion for ABS:

$10 \times 10^{-5}$  per  $^{\circ}\text{C}$

Rule of thumb: ABS expands/contracts 1mm/metre/ $10^{\circ}\text{C}$  temperature change

The coefficient of linear expansion for PVC-U:

$7 \times 10^{-5}$  per  $^{\circ}\text{C}$

Rule of thumb PVC-U expands/contracts: 0.7mm/metre/ $10^{\circ}\text{C}$

### Example:

What is the expansion/contraction of an insulated, 30m long, ABS Condenser water main, installed at  $15^{\circ}\text{C}$ , operating at a maximum temperature of  $35^{\circ}\text{C}$  and a minimum temperature of  $5^{\circ}\text{C}$ ?

Expansion:

$$L = 30,000 \text{ mm}$$

$$\alpha = 10 \times 10^{-5}$$

$$\Delta T = 35 - 15 = 20^{\circ}\text{C}$$

$$\begin{aligned} \text{Expansion} &= 30,000 \times 10 \times 10^{-5} \times 20^{\circ}\text{C} \\ &= 60\text{mm} \end{aligned}$$

Contraction:

$$L = 30,000 \text{ mm}$$

$$\alpha = 10 \times 10^{-5}$$

$$\Delta T = 15 - 5 = 10^{\circ}\text{C}$$

$$\begin{aligned} \text{Contraction} &= 30,000 \times 10 \times 10^{-5} \times 10^{\circ}\text{C} \\ &= 30\text{mm} \end{aligned}$$

Hence the system must be designed, using expansion loops, the natural flexibility of pipe, or expansion bellows, to cater for a differential movement, with an expansion of 60mm and a contraction of 30mm.

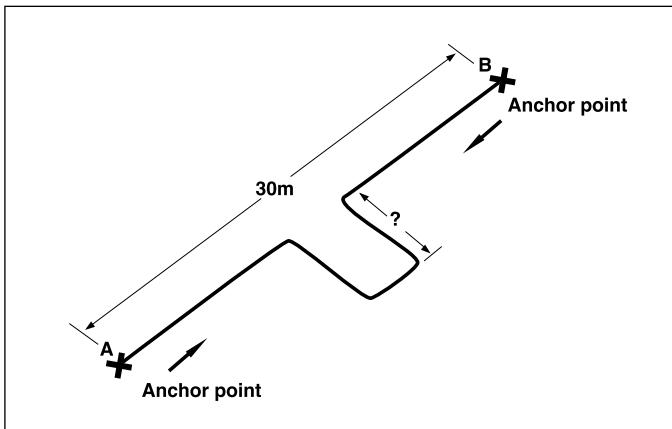

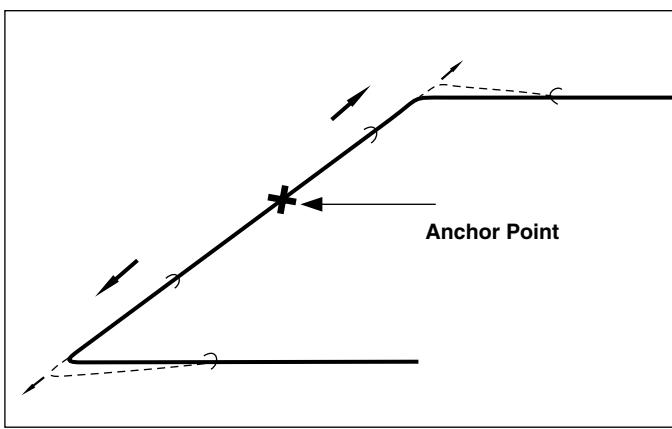

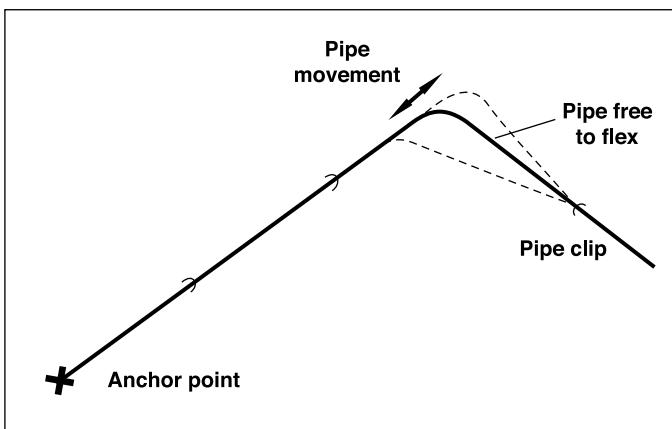

The system should be designed to cater for the greater amount of movement of either expansion or contraction.

## Catering for pipe movement

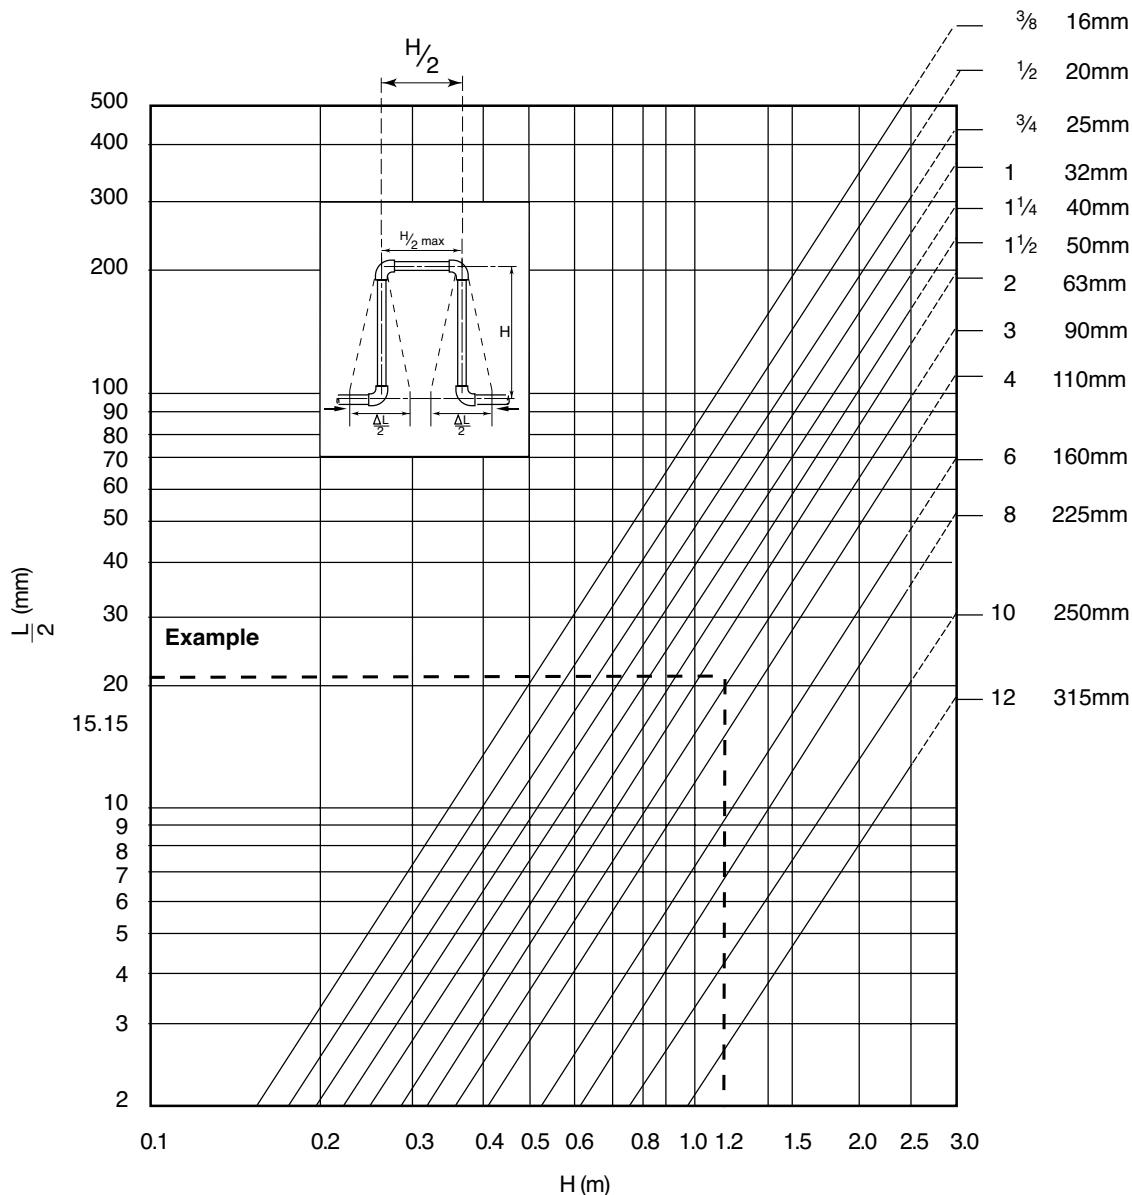

Systems installed above ground should be designed to ensure that there are sufficient changes in direction to accommodate expansion and contraction. The support method described later will ensure that the pipework can move axially without snaking. If sufficient changes in direction are not available within the design of the system, alternative methods of catering for pipe movement can be considered such as expansion loops or flexible rubber bellows.

## Expansion loops

The length of unrestrained pipe (free leg length) required to accommodate expansion can be calculated from the graph overleaf.

## >TECHNICAL INFORMATION

### Example:

Calculate the size of expansion loop required for a 3" diameter pipe expanding 42mm and contracting 21mm:

Based on the worst case ie. 42mm expansion,  $\frac{\Delta L}{2} = 21\text{mm}$

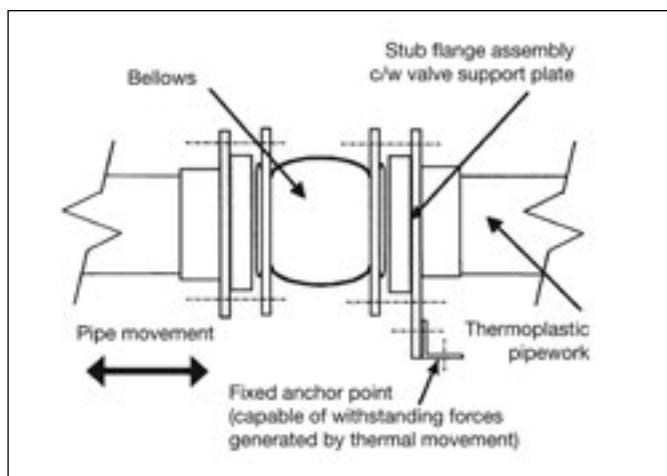

Draw a horizontal line from the vertical section to meet the 90mm pipe gradient line.  
 Drop a perpendicular from the intersection point to the horizontal scale. The figure obtained is the free leg length of the loop required.  
 Hence, in this instance a loop measuring 1200mm long x 600mm wide will cater for  $\pm 21\text{mm}$  movement i.e. the loop will cater for both the expansion and contraction of the pipe.

# >TECHNICAL INFORMATION

## Expansion bellows

Axial expansion bellows may also be used in place of utilising the natural flexibility of the pipework. These must be of a suitable design to ensure correct operation with the pipework.

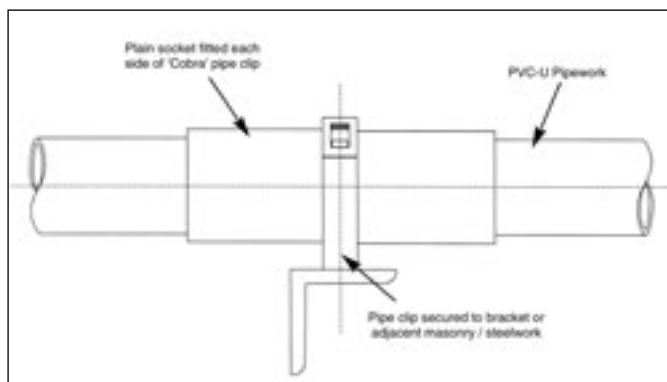

### Typical bellows arrangement

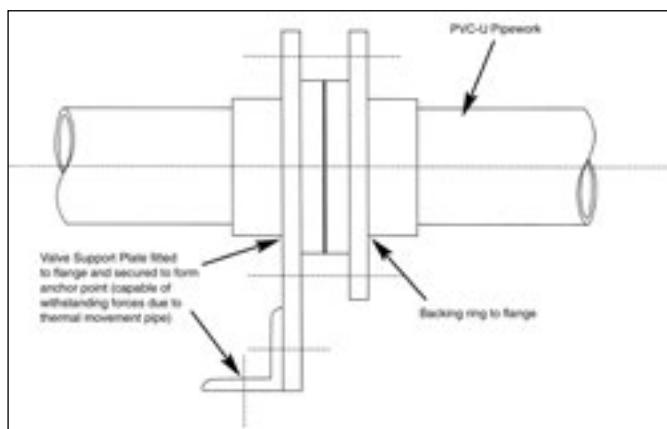

### Anchor points

The direction of pipe movement can be controlled by the use of anchor points at strategic positions. There are a number of methods of securely anchoring plastic pipes, some of which are detailed below. However it should be noted that tight fitting pipe supports or U bolts should not be used since damage to the pipe could occur.

### Construction of typical anchor points

1. Small Bore (up to 4" Pipework)

2. Larger pipe (above 4" Pipework)

## Pipe supports and clips

Pipe supports and clips should provide lateral restraint and allow free, unrestricted, axial pipe movement. Standard 'drop rods' may not provide sufficient lateral restraint and the pipe could start to 'snake'.

### Support centres

The recommended distance between supports for pipes filled with water is given in the table below. Where the contents have a specific gravity greater than 1 the distance must be decreased by dividing the recommended centre distance by the specific gravity. For vertical pipes, support centres may be increased by 50%.

### PVC-U Support distances

metric	imperial	20°C	30°C	40°C	50°C
20	1/2	0.90	0.85	0.85	0.80
25	3/4	1.00	0.95	0.90	0.90

# >TECHNICAL INFORMATION

## Support of heavy equipment

Large valves, strainers and other heavy equipment should always be independently supported to prevent undue loading onto the system. Valve support plates have been designed for this purpose and may be used in place of flange backing rings.

## Anchor blocks

For wholly solvent welded systems the pipework is pressure balanced and anchor thrust blocks are not required. When rubber ring joints are used it is necessary to provide concrete anchor blocks of changes in direction such as elbows, bends, tees etc. This is necessary to withstand the forces generated by system pressurisation.

For greater detail, users in the U.K. are recommended to study the Code of Practice CP 312 published by the Pipe and Fittings Group of the British Standards Institute covering installations above and below ground.

## Buried pipes

Recommendations covering essential requirements for installations below ground may be summarised as follows:

In general, trenches should not be less than a metre deep. Trenches should be straight sided, approximately 300mm wider than the pipe diameter to allow proper consolidation of packing materials. Trench bottoms should be as level as is practical.

Large pieces of rock, debris and sharp objects should be removed.

Alternatively gravel can be laid approximately 100mm deep on the floor of the trench. (Sand may be used but subterranean water is liable to wash sand away and leave the pipe unsupported.)

If pipes are jointed above ground, they should remain undisturbed for 2 hours before being lowered into the trench.

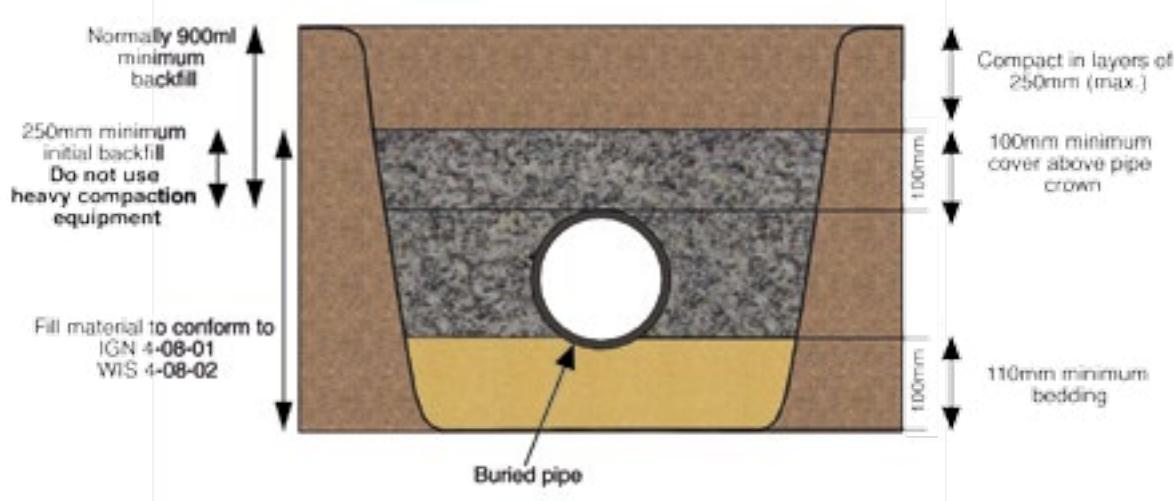

After laying, pipes should be covered with gravel or similar material to a depth of 100mm above the crown of the pipe. The gravel should be extended sideways to both trench walls and compacted. This should be done prior to testing, with joints left exposed.

Care should be taken to ensure that sharp objects, stones, etc, are prevented from falling into the trench before covering the pipe.

After pressure testing, joints should be covered with gravel or similar material, and back filling completed.

A section of pipe installed below ground to the above recommendations is shown in the illustration.

**Buried Pipe Example**

# >TECHNICAL INFORMATION

## THREADED CONNECTIONS

### Connections - plastics to metal

There are several recommended methods to connect metal and plastic systems:

Composite unions                  Flanges

Male threaded fittings              Female threaded fittings

Plastics expand or contract more than metals for any given change in temperature. The practice of connecting plastic threaded fittings to metal threads is not recommended where the joint is likely to experience a temperature change of more than +/-5°C, otherwise leaks may occur.

Composite unions are available with brass male or female BSP threaded adaptors.

If it is required to cut a thread onto pipe, use a sharp die especially reserved for plastic pipes and cut full thread depth without lubricant, in one operation.

This should only be attempted on pipe sizes up to 2" NB.

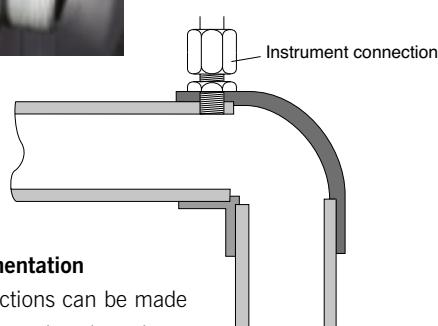

Class T/Class 7 pipe must be used. (Metric series pipe not suitable for threading).

Assembly should be carried out by hand and final tightening by a strap wrench, if necessary.

Extra care must be taken not to overtighten or damage the thread.

### Pipe wrenches must not be used

It is recommended that PTFE tape or Fibreseal be used when making plastic threaded joints/connections.

### Connection to instrumentation

Instrumentation connections can be made by drilling through pipe and socket where the material is at its thickest and tapping the hole to receive a threaded fitting, as shown below:

#### Pipe size

16mm-63mm/3/8"-2"

#### Connection size

Use tees, reducing bushes and threaded fittings

75mm-110mm/2 1/2"-4"

Max. tapping 1/2" BSP

125mm-140mm/5"

Max. tapping 3/4" BSP

160mm & above/6" & above

Max. tapping 1" BSP

Such connections, if correctly drilled and tapped with full thread form, will be limited to Class C/PN10 pressures.

### Flanged joints

Full face flanges are available from 1/2" to 4". Or 20mm to 110mm.

Stub flanges are available from 1/2" to 12" and in metric sizes from 20mm to 315mm and provide a convenient means of converting from Imperial to Metric systems in sizes 8"/200mm and above (PVC-U only).

The correct backing ring must be used with stub flanges.

### Flange bolting procedure

The following procedure is recommended for installing flanges:

1. Inspect flange faces and ensure that they are clean and undamaged.
2. Check that the correct backing ring (stub flanges only) and rubber gaskets have been supplied. Care should be taken when mixing Metric and Imperial components.
3. Loosely assemble flanges. Ensure that flanges and bolt holes align and that the flange faces are parallel. Ensure that the gasket is correctly positioned between the flanges.
4. Ensure that the appropriate sized washer is placed under both bolt heads and nuts.
5. Tighten the nuts and bolts in a diagonally opposite sequence (see below) to ensure even loading around the flange to avoid distortion. It is recommended that the nuts and bolts be tightened as uniformly as possible progressively from a finger tight start.
6. Repeat as necessary until tightness of all bolts is achieved.

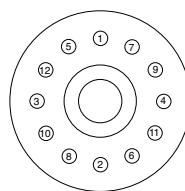

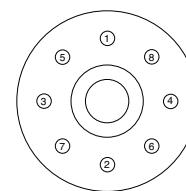

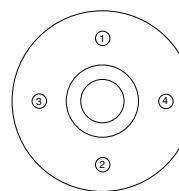

### Tightening torques for flange bolts in piping systems

#### Recommended Torque Values (Nm)

Size	Torque
16mm - 3/8"	15
20mm - 1/2"	15
25mm - 3/4"	15
32mm - 1"	15
40mm - 1 1/4"	20
50mm - 1 1/2"	30
63mm - 2"	35
75mm - 2 1/2"	40
90mm - 3"	40
110mm - 4"	40
125mm	50
140mm - 5"	50
160mm - 6"	60
200mm	70
225mm - 8"	70
250mm - 10"	80
315mm - 12"	100

The tolerance on torque is +/-10%

### Tightening sequence

# >TECHNICAL INFORMATION

## JOINTING PROCEDURES

The solvent cement operates by chemically softening the outside of the pipe and the inside of the fitting. Joint integrity is greatly reduced if these surfaces are not absolutely clean and properly prepared.

- 1) The pipe must be cut clean and square. A suitable wheel cutter will eliminate swarf. A saw may be used, however this will create dust which may enter the pipework system.

- 2) Chamfer the pipe, approximately 3mm to 5mm depending upon pipe size using a chamfering tool or coarse file. This prevents the solvent cement layer being scraped from the surface of the fitting when the joint is assembled.

- 3) Mark the pipe a known distance from the end and clear of the area to be abraded. This should be used to check the pipe penetration into the socket after assembly.

- 4) Thoroughly abrade the end of the pipe over a length equal to depth of the fitting socket, using clean coarse emery cloth.
- 5) Thoroughly abrade the inside surface of the fitting socket.
- 6) Clean thoroughly the abraded surfaces of pipe and fittings using a clean, lint free cloth or paper towel, moistened with Astore Eco-cleaner.

- 7) Using a clean brush, apply the Astore solvent cement to the pipe and fitting using longitudinal strokes. The abraded areas should be completely covered with the cement. The amount required will vary with pipe diameter and the fit between pipe and fitting, but should be such in all cases that the cement is still liquid when pipe and fitting are assembled. It is important to apply cement quickly, to enable assembly without excessive force being required.

### Note

The images in this demonstration show ABS pipework being jointed. The same procedure applies to PVC-U pipework.

# >TECHNICAL INFORMATION

## JOINTING PROCEDURES

- 8) Immediately after application of cement, push pipe fully home into the fitting. Do not twist. Hold the pipe and the fitting for times varying from a few seconds on sizes  $\frac{3}{8}$ " to 1 minute on sizes 8" and above. Application of the correct amount of cement will result in a neat bead of cement at the edge of the fitting and the pipe. Excessive deposits inside the pipes & fittings must be avoided as these can weaken the wall, particularly on small sizes. When working under cold conditions make sure the joints are free from frost and moisture and allow extra curing time to compensate for the lower temperature.

- 9) Wipe off excess cement from outside of the joint.

The drying time for joints will vary with fit, amount of solvent cement applied, ambient temperature and working pressure. It is recommended that whenever possible, joints are left to cure for 24 hours before the test pressure is applied (up to 8"/225mm). However, it is recognised there will be times when joints will need to be put into service within a few hours of being made. A rough but safe working guide, where contents temperature will not exceed 20°C, is 1 hour per bar for systems up to 4". For larger sizes increase this time to 1½ hours per bar. In any event joints should be allowed to cure for a minimum of 4 hours. (See page 15 for full details).

- 10) Using the mark previously made, check that the pipe has been fully inserted.

- 11) Do not disturb the joint for at least 10 minutes after assembly.

On larger sizes do not subject the joint to bending or twisting forces for at least 4 hours (see below). When making subsequent joints, which can be done without waiting, take care not to transmit forces to freshly made joints in the system. Allow sufficient drying time prior to pressurisation of the system (see page 15).

- 12) Replace lids on containers.

## CAUTION

- DO NOT use near naked flames
- DO NOT smoke in the working area
- DO NOT use in confined spaces
- DO NOT joint in the rain or wet conditions
- DO NOT use dirty brushes
- DO NOT use dirty or oily cleaning cloths
- DO NOT use the same brushes for different cements
- DO NOT dilute or decant Astore solvent cement
- Follow safety instructions on Astore solvent cement and Eco-cleaner containers
- Always wear appropriate personal protective equipment

## Notes

1. The integrity of Astore systems may be affected if Astore solvent cement and Astore Eco-cleaner are not used. Astore disclaims responsibility for any Astore system constructed with any other cement or not fabricated in accordance with the instructions herein.
2. To achieve the correct speed of application on sizes 5"/140mm and above, cement should be applied simultaneously to pipe and fitting, by two people.

# >TECHNICAL INFORMATION

## DRYING TIMES

The drying times will vary with fit, amount of solvent cement applied, ambient temperature and working pressure. It is recommended that, wherever possible, joints of sizes up to 8"/225mm are allowed to dry for at least 24 hours, and sizes 10" and 12"/250mm and 315mm for at least 48 hours for ABS or 30 hours for PVC-U. These guidelines are based on an ambient temperature of between 10°C to 40°C. Longer drying times will be required at lower and higher ambient temperatures.

It is recognised that there will be occasions when the system will need to be put into service within a few hours of being made. A rough but safe working guide where the ambient temperature is between 10°C to 40°C and the contents temperature does not exceed 20°C is as follows:

Size Range	Up to 2½" 75mm	3" to 4" 90mm to 125mm	5" & 6" 140mm & 160mm	8" 200mm & 225mm	10" & 12" 250mm & 315mm
Drying Time ABS	0.5 hour / bar	1.0 hour / bar	1.5 hours / bar	2.0 hours / bar	48 hours minimum
Drying Time PVC-U	1.0 hour / bar	1.0 hour / bar	1.5 hours / bar	2.0 hours / bar	30 hours minimum

**Note** - minimum drying period should never be less than 1 hour.

An indication of the number of joints to be made per litre of cement is as follows:

mm	inch	Joints per litre	
		ABS	PVC-U
16 - 32	⅜ - 1	400	300
40 - 63	1¼ - 2	200	120
75 - 110	2½ - 4	70	50
125 - 140	5	20	15
160 - 225	6 - 8	10	8
250 - 315	10 - 12	5	3

## CHEMICALLY RESISTANT PVC-U CEMENT

For PVC-U applications with the following chemicals we recommend the use of HCR-36 (Product code R PCO.0100) an alternative to our Astore solvent cement. Our Astore PVC-U cement. Always use the appropriate HCR-36 cleaner (Product code M CFO.0100) when using this chemical resistant cement.

Sulphuric acid	concentration higher than 70%
Nitric acid	concentration higher than 20%
Hydrochloric Acid	concentration higher than 25%
Hydrofluoric acid	each concentration
Sodium hypochlorite	active chlorine higher than 7.5%
Lyes, bases (caustic soda)	concentration higher than 35%

### Maximum gap 0.3mm      Maximum pressure

20°C	12 bar
50°C	6 bar
60°C	4.5 bar

Maximum pressure depends also on the pipe system used and PN class.

**Note:** HCR-36 Solvent Cement & Cleaner is only suitable up to 4"/110mm.

# >TECHNICAL INFORMATION

## ADDITIONAL IMPORTANT INFORMATION

### Thermal insulation

Some insulation products can contain substances capable of having a detrimental effect on thermoplastic pipework eg. certain types of foam rubber insulations can cause certain thermoplastics to fail at elevated temperatures.

Recommended insulation - a list of some of the common types of insulation materials known to be suitable with ABS and PVC-U pipework are as follows:

Fibre wool, such as 'Rockwool';

Armaflex Class 1 HT;

Koolphen K Phenolic foam;

Polystyrene;

Note - the above list is not exhaustive.

Some adhesives can also be detrimental. Do not bond insulation to thermoplastic pipework. (This comment also applies to any tapes, adhesives, or other substances used to secure the heating tape to the pipework. Contact our technical department if you have any concerns.)

### Trace heating

Thermoplastic pipework can be damaged by plasticisers used in the outer coverings on some heating tapes. Tapes sheathed in plasticised PVC must be avoided, unless specifically approved by us. (This comment also applies to any tapes, adhesives, or other substances used to secure the heating tape to the pipework.)

### Recommended heating tapes

The selection of heating tapes with silicone rubber, woven wire, or woven polyester outer sheaths will eliminate the risk of plasticiser migration. These tapes are therefore preferred for use on thermoplastic systems. For specific advice please refer to heating tape manufacturers.

### Pipe contents identification

Do not put self-adhesive labels directly on to pipe surfaces

as this may be detrimental to pipe performance. It is recommended that some sort of barrier, such as aluminium foil, is placed between pipe and identification label.

### Intumescent mastic and mastic sealants

Certain mastic sealants are formulated with phthalates. Phthalates are known to be extremely aggressive toward ABS and PVC-U materials, and therefore confirmation of the suitability of any mastic sealant should be determined before being used in conjunction with ABS and PVC-U pipework.

### Pipe clips

It is important that the composition of pipe clips and their linings do not include substances which might have a detrimental effect upon the ABS & PVC-U pipe. Please check for suitability before use. We strongly recommend the use of Astore pipe brackets for pipe sizes up to and including 110mm OD/4" NB, wherever circumstances allow.

### Pneumatic testing

Pneumatic testing is not recommended because of the risk to personnel or property if, for example, a joint has been temporarily assembled without solvent cement and has then been mistakenly left in that condition. Such joints could separate suddenly and violently during the test.

Leak detection sprays designed to detect air leaks on steel pipework can damage thermoplastics. Care should be taken to ensure only compatible types are used.

### Contact with synthetic oils

Some synthetic oils are unsuitable for use with thermoplastic pipe systems. The main types of synthetic oils identified as being incompatible with thermoplastic pipe systems includes Esters, Polyalkylene Glycols, and Organic Phosphates.

It should be noted that some metal coil manufacturers use these oils in their manufacturing process. This is normally drained from the coil. If it is suspected that residues of oil may remain in the coil it should be filled with methylated spirits, then thoroughly flushed with water.

### Freezing conditions

Precautions should be taken to prevent contents freezing, as this can cause pipework to split.

For ABS Mono-ethylene glycol can be added to the system to lower the freezing point. See opposite for advice on insulation and trace heating.

### Contact with fluxes

Some fluxes can be detrimental to thermoplastic pipework.

Care should be taken when soldering copper pipework directly above, or close to, pipework.

### Buried pipes

Do not lay pipework in contaminated ground eg. 'brown-field' sites.

Do not lay pipework in ground where spillages of chemicals may occur.

### Thread sealants

Some thread sealants can damage plastic pipework. PTFE tape or Fibreseal should be used when making threaded connections.

### Resistance to U.V. (sunlight)

Care should be taken to avoid exposure to U.V. light, eg. sunlight, particularly during storage. This will cause discolouration and deterioration of the material. Whilst this is a surface effect only it is recommended that precautions be taken to prevent this happening. If stored outdoors pipe should be covered with opaque sheeting. If installed outdoors it can be protected from the effects of U.V. by insulating or painting.

### Pressure surges

Astore pipework can withstand pressure surges within the limitations detailed within CP312 Part 2:1973 and its amendment dated 1977. On no account should pressure surges be allowed to exceed the maximum continuous working pressure calculated using the graph on page 6.

# >TECHNICAL INFORMATION

## Health and Safety at Work Act and Coshh Regulations

Attention is drawn to the requirements in the U.K. of this Act and to the 1988 Control of Substances Hazardous to Health (COSHh) Regulations.

Astore UK cannot accept responsibility for accidents arising from the misuse of its products because of bad installation or incorrect application.

## Material safety data

Material safety data sheets are available on our website [www.astore.co.uk](http://www.astore.co.uk)

## Filling and flushing

When purchasing chemicals for either flushing or long-term system use, suppliers should be advised of the material it is for. Guidance on the suitability of various system flushing or filling fluids with the various thermoplastics can be found at [www.astore.co.uk](http://www.astore.co.uk).

## Testing

It is suggested that the following test procedure be followed, after joints have been allowed to dry for the appropriate minimum time.

The system should be divided conveniently into test sections.

Fill the section with cold water making sure that no air pockets remain.

Do not pressurise at this stage.

Check the system for leaks. If no leaks are apparent check for and remove any remaining air. Increase pressure up to 3 bar. \*Do not pressurise further at this stage.

Leave the section pressurised for 10 minutes. If the pressure decays, inspect for leaks and rectify as necessary. If the pressure remains constant, slowly increase the hydrostatic pressure to 1 1/2 times the nominal operating pressure.

Leave the section pressurised for a period not exceeding 1 hour. During this time the pressure should not change.

## CAUTION

Personnel must stand well clear when pressure testing systems.

Similarly, under no circumstances should pressure tests be carried out using pressurised gases. Such a test could be extremely dangerous and does not serve any useful purpose.

### \*Note:

If extended times are required to achieve hydrostatic pressure, either leakage has occurred or air remains in the line. Inspect for leakage and if none is apparent, reduce the pressure and check for trapped air which must be removed before further pressurisation is commenced.

If a leakage source is difficult to establish it is acceptable to pressure the line using air or nitrogen to a maximum pressure of 1.5 bar. Test joints etc. with a soap solution.

## Colour

Astore ABS products are a mid-grey colour, generally in accordance with BS5252 and RAL 7001.

Astore PVC-U products are a dark-grey colour, generally in accordance with BS5252 and RAL 7011.

## Dimensions and Standards

Astore systems are manufactured in accordance with the following standards:

### PVC-U pipe:

Imperial BS 3505 - 3506 EN1452

Metric DIN 8061/-2, KIWA 49 (Rev.1)

### ABS pipe:

BS 5391 Part 1

### PVC-U fittings:

Imperial BS 4346 Part 1, Threaded BS 21, ISO 7 Din 2999

Metric DIN 8063 ISO277/1

Threaded & Transition ISO R7, ISO UNI 228/1, BS 21, Din 2999

### ABS fittings:

BS 5392 Part 1

## Materials

Materials used for the manufacture of Astore pressure pipe fittings and valves are selected for their non-toxic properties and suitability for potable water as required by the appropriate international authorities.

Both ABS and PVC-U comply with ISO 727 and the requirements of the World Health Organisation for potable water transportation.

## Gaskets and seals

Gaskets and O-Ring seals are made from EPDM except where stated otherwise.

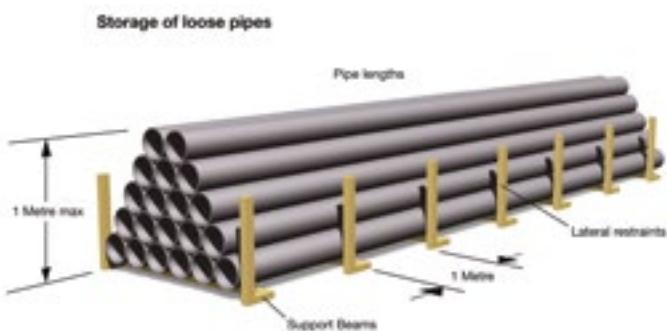

## Interchangeability

Components in the imperial and metric ranges are not interchangeable, except for 2 1/2"/ 75mm and 5"/140mm.

# >TECHNICAL INFORMATION

## Handling and Storage

Care should be taken at all stages of handling, transportation and storage. Pipe must be transported by a suitable vehicle and properly loaded and unloaded, eg. wherever possible moved by hand or mechanical lifting equipment. It must not be dragged across the ground. The storage should be flat, level and free from sharp stones.

## Lengths

Pipe lengths stored individually should be stacked in a pyramid not more than one metre high, with the bottom layer fully restrained by wedges. Where possible, the bottom layer of pipes should be laid on timber battens at one-metre centres.

On-site, pipes may be laid out individually in strings.

(Where appropriate, protective barriers should be placed with adequate warning signs and lamps.)

## Bundles

Bundled packs of pipe should be stored on clear, level ground with the battens supported from the outside by timbers or concrete blocks. For safety, bundled packs should not be stacked more than three metres high.

Smaller pipes may be nested inside larger pipes. Side bracing should be provided to prevent stack collapse.

Similar precautions should be taken with fittings and these should be kept in protective wrappings until required for use.

## Weathering

Prolonged storage (greater than one month) or storage in areas where high temperature is anticipated, the stack height should never exceed 4 layers or 1 metre maximum height. Such stacks should be protected from the effects of weathering by placing an opaque covering over them. If fixed to the side bracing the sheets will provide protected and shaded conditions and allow a free passage of air around the pipes.

Where the pipes are to be installed in locations likely to be permanently exposed to prolonged periods of strong sunlight, such as in tropical countries, the life can be extended by painting the pipe with household gloss or emulsion. Cellulose based paints should only be used with extreme care and close attention paid to the manufacturers instructions.

## Pipe Contents Identification

Do not put self-adhesive labels directly onto pipe surface as this can cause stress cracking. It is recommended that some sort of barrier such as aluminium foil, is placed between the pipe and identification label.

## Approvals

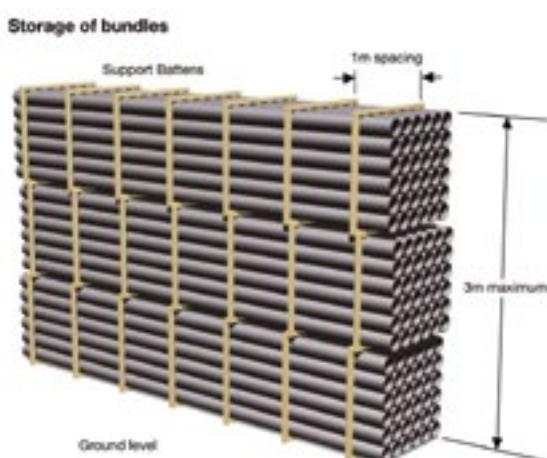

Astore products are manufactured in accordance with the following standards:

**Astore PVC-U:** is Water Regulations Advisory Scheme (WRAS) approved and Listed (Certificate number 1403092).

**Astore ABS:** is Water Regulations Advisory Scheme (WRAS) approved and listed (Certificate number 1212154).

**Astore PVC-U** premium pipe is Approved for use within public water supplies & by the Secretary of State. Premium PVC-U pipe is Listed in the list of approved products as published by DWI.

All Astore solvent cements are fully WRAS approved. Contact our customer services team for full details.

# >ABS & PVC-U

Astore offers an extensive range of ABS & PVC-U imperial pressure pipework. The full range is accompanied by a wide selection of cost-effective valve options and other accessories including compression fittings and clamp saddles.

## ASTORE ABS

### Key Product Information

Imperial size range:

½" to 8"

Temperature range:

-40°C to +60°C

Pressure Rating:

Up to Class E

### Key Product Features

Lightweight & Easy to install

Fully solvent welded system

Tough & durable even at low temperatures

Wide temperature range

## ASTORE PVC-U

### Key Product Information

Imperial size range:

½" to 12"

Temperature range:

0°C to +60°C

Pressure Rating:

Up to Class E

### Key Product Features

Lightweight & Easy to install

Fully solvent welded system

Corrosion & limescale resistant

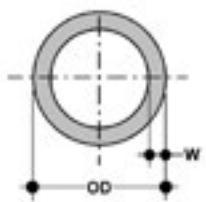

Good chemical resistance properties

### FIBRESEAL (Sealing tape for threaded connections)

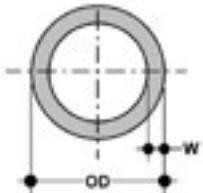

Description	Code
Fibreseal tape	F AF0.0100

Note: does not contain PTFE

# CLAMP SADDLES

Astore clamp saddles are the ideal solution for branching from existing pipelines for water and irrigation.

## RANGE

Astore clamp saddles are supplied in the following types:

- 505 single branch. Coupling with pipes from D 20 up to D 315 mm, threaded branches from  $\frac{1}{2}$ " to 4". Provided with 2, 4 or 6 bolts according to the diameters and metal reinforcing ring on the threaded branches.
- 508 double branch. Coupling with pipes from D 20 up to D 315 mm, threaded branches from  $\frac{1}{2}$ " to 4". Provided with 2, 4 or 6 bolts according to the diameters and metal reinforcing ring on the threaded branches.

## MATERIALS

Saddle body in PP black co-polymer, nuts and bolts in zinc chromed steel, O-ring gasket in NBR, reinforcing ring in AISI 430.

## STANDARDS

Threads following DIN 2999 - BS 21 - ISO R 7/1 up to D 160 mm, ISO 228 from D 180 to D 315 mm.

Coupling to pipes complying:

- PE metric sized according to UNI 10910, DIN 8072-8074, ISO 3607 and UNI EN 12201.
- PVC metric sized according to ISO 161, UNI EN 1452, BRL-K502.
- PP metric sized according to ISO 3609, UNI 8318, DIN 8077.

## PRESSURE RATING

505 and 508 - see table below.

## 505 | WORKING PRESSURE AT 20°C ACCORDING TO ISO 13460

## >CLAMP SADDLES

## INSTALLATION

### INSTALLATION

- 1) Define the position of the branch and clean the external surface of the pipe.

- 2) Place the O-ring into the relevant seat and position the upper part of the saddle on the pipe.

- 3) Couple the bottom part of the saddle with the upper one. Insert the bolts from the bottom, screw the nuts and tighten the bolts diagonally opposite each other.

- 4) Drill a hole in the pipe taking care not to damage the reverse of the pipe or the gasket.

# COMPRESSION FITTINGS

Astore PP compression fittings are joints for PE pipes dedicated to water distribution systems.

## RANGE

The extensive range of Astore fittings can satisfy a very wide range of plant engineering installation requirements.

The range comprises of fittings from D 16 mm up to D 110 mm.

The threads have a metal reinforcement on the external part of the thread for added security.

## MATERIALS

Body and nut in polypropylene black co-polymer, clinching ring in white POM resin, O-ring in NBR, reinforcement ring in AISI 430.

## REFERENCE STANDARDS

Astore compression fittings are manufactured in compliance with the following standards: ISO 3458, ISO 3459, ISO 3501,

ISO 3503, ISO 14236, DIN 8076-3, UNI 9561.

The joints can be installed on all PE pipes which comply with the following standards: ISO 3607, DIN 8072, DIN 8074, UNI 10910, UNI EN 12201.

The threaded versions are manufactured in compliance with standard ISO 7/1.

## PRESSURE RATING AT 20°C

- 16 bar - from D 16 mm up to D 63 mm
- 10 bar - from D 75 mm up to D 110 mm

Astore is an ISO 9001 certified company, certificate No. 354.

Astore is member of the Irrigation Association (IA).

Astore compression fittings are approved by DVGW (DW-8616BQ0078).

## COMPANY APPROVAL

Italian Institute of Plastics (IIP) has tested the conformity of Astore production system to UNI EN ISO 9001 (certificate No. 354).

This standard defines the characteristics (dimensional, performance, environmental, safety and organisational setup) of a product and deem them suitable for the demands of the market.

The extensive range of quality high performance products are recognised and appreciated all over the world.

## >COMPRESSION FITTINGS

### INSTALLATION D16-63

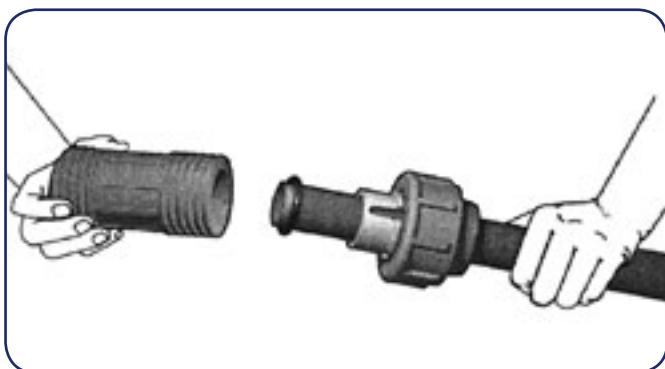

1) Cut the pipe square at 90° to the required length using a pipe cutter.

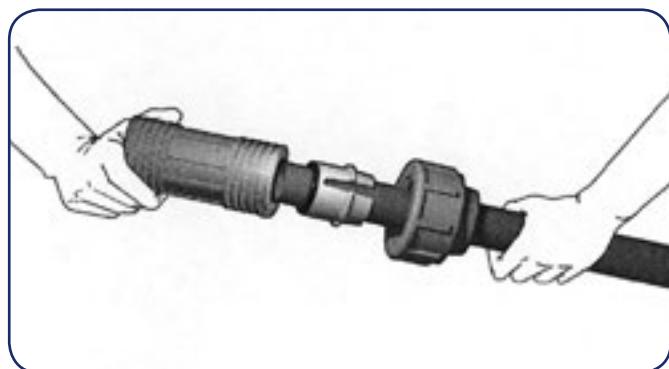

2) Insert on to the pipe in the following order, collar first and place the O-ring on the mouth of the pipe (fig.2 & 3).

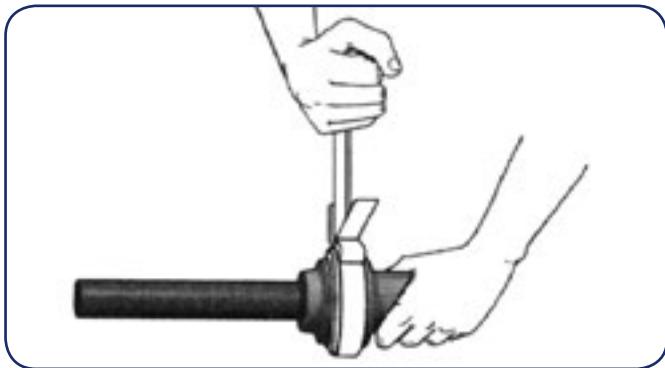

3) Insert the body of the joint until the gasket is located into the body of the fitting (fig.4).

4) Insert the body of the joint until the gasket has slid inside the body.

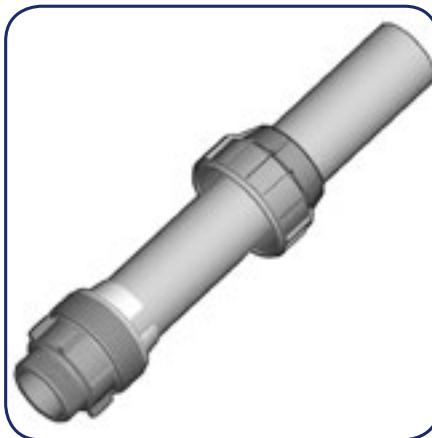

5) Fully tighten the nut. The nut can be tightened manually up to d32 mm, but for larger diameters it is advisable to use a pipe wrench.

## >COMPRESSION FITTINGS

### INSTALLATION D75-90

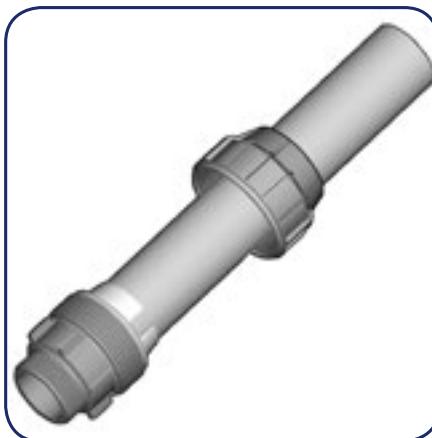

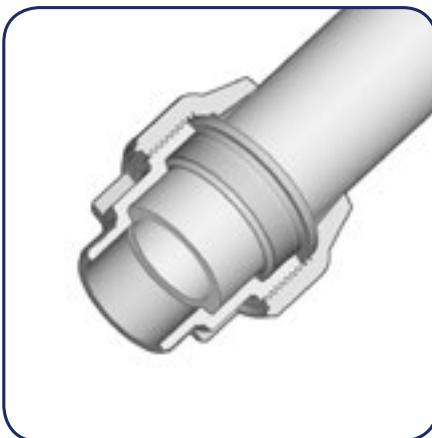

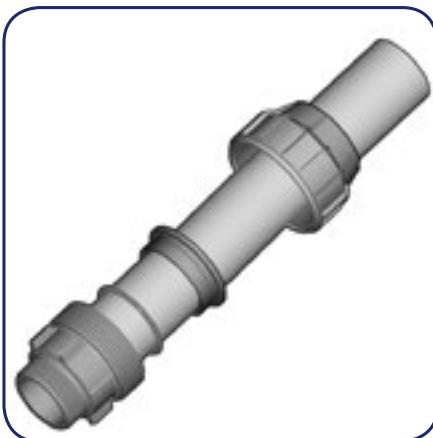

1) Cut the pipe clean and square at 90° to the required length using a pipe cutter. Lubricate the pipe and the gasket so that the fittings sit correctly on the pipe. Insert the fittings onto the pipe in the following order: ring nut, clinching ring, thrust bushing and put the gasket on the mouth of the pipe.

2) Push the body of the fitting on the pipe until the gasket is pushed inside the body (fig.2).

3) Push the body of the fitting on the pipe until the gasket is located in the body itself (fig.2).

### INSTALLATION D110

1) Cut the pipe clean and square at 90° to the required length using a pipe cutter. Lubricate the pipe and the gasket so that the fittings sit correctly on the pipe. Insert the fittings onto the pipe in the following order: ring nut, thrust bushing, gasket and body of the fitting.

2) Fully tighten the nut until the gasket is stuck inside the body.

3) Untighten the nut, open the clenching ring and insert it on the pipe, fully tighten the nut using a pipe wrench.

# ASTORE UK - TERMS AND CONDITIONS OF SALE

## 1. DEFINITIONS:

'Seller' shall mean Glynwed Pipe Systems Limited, registered in England under number 1698059. 'Buyer' shall mean any company, organisation or individual to whom a quotation is offered, or whose order is accepted by the Seller.

## 2. CONDITIONS:

All offers, quotations, estimates, acceptances and contracts are subject to these Conditions of Business and any terms or conditions which any other person shall seek to impose or make part of any contract shall, so far as is inconsistent with these Conditions of Business, not apply unless expressly agreed by the Seller in writing. The headings in these conditions are for convenience only and shall not affect their interpretation.

## 3. QUOTATIONS, PRICE VARIATIONS AND MADE TO ORDER GOODS:

a) Any quotation given by the Seller is an invitation to the Buyer to make an offer only and no order of the Buyer placed with the Seller in pursuance of a quotation or otherwise shall be binding on the Seller unless and until it is accepted in writing by the Seller.

b) Unless stated otherwise, all quotations and published price lists are ex works, exclusive of VAT and shall remain valid for 30 days or such period as may be quoted but nevertheless the Seller may amend or withdraw any quotation by written or oral notice. Quotations may be varied if the Buyer makes variations in his specifications but see special conditions relating to Made to Order Goods.

c) Certain products are denoted 'MTO' in the Seller's published price lists. These products are Made to Order Goods and the Seller manufactures or procures these goods on a bespoke basis only. Where a Buyer has made an offer for "MTO" products that the Seller has accepted in writing the Buyer forfeits their right to cancel their offer unless the Seller confirms in writing that it will accept cancellation by the Buyer. Where the Seller does not provide written confirmation of the Buyer's cancellation the Buyer remains liable for the full contractual value of all 'MTO' products. 'MTO' 'Call-off' orders must be taken within 12 months of the original order date.

## 4. STATEMENTS OR REPRESENTATIONS TO THE BUYER:

If any statement or representation has been made to the Buyer upon which the Buyer relies other than in the documents enclosed with the Seller's quotation, the Buyer must set out that statement or representation in a document to be attached to or endorsed on the order in which case the Seller may submit a new quotation.

## 5. DELIVERY - TIME:

a) Any period for delivery given at any time and in any manner by the Seller is an estimate only and is not binding on the Seller. Delivery periods are normally calculated from the later of:

- i) acceptance of order; or
- ii) where applicable, the receipt by the Seller of a detailed specification or drawings.

b) Time shall not be deemed to be of the essence of the contract. Failure by the Seller to meet any quoted delivery period for any part or the whole of the order shall not entitle the Buyer to rescind the contract or to claim damages of any nature.

c) The Seller will endeavour to comply with reasonable requests by the Buyer for postponement of delivery but shall be under no obligation to do so. Where delivery is postponed otherwise than due to default by the Seller the Buyer shall pay all costs and expenses including a reasonable charge for storage and transportation occasioned thereby and an extra charge for split delivery if applicable.

d) The Buyer will receive delivery of any consignment between the hours of 8.00am and 4.00pm Monday to Friday inclusive, unless otherwise agreed in writing. Cost incurred by the Seller arising from the Buyer's refusal to accept consignments within the agreed hours shall be borne by the Buyer.

## 6. DELIVERY AND RISK:

a) Except where stated to the contrary in the contract, delivery shall be made as follows:

- i) where the Buyer provides the transport, delivery shall be made ex the Seller's works;
- ii) where the Seller provides the transport, delivery shall be made to the premises of the Buyer, or the premises of the Buyer's customer or works site if the Buyer has requested delivery to be so made but where the Buyer has made such a request the Seller will make a first delivery to the Buyer's customer or works site as so much of the goods as is available for that delivery but subsequent deliveries will be made to the premises of the Buyer.

b) The Seller may at its discretion make partial delivery of orders and invoice the same.

c) Risk in the goods shall pass on delivery.

d) Where goods are sent FOB the Seller's responsibility shall cease when the goods are placed on board ship or aircraft without the need for the Seller to give notice to the Buyer and the provisions of Section 32(3) of the Sale of Goods Act 1979 shall not apply.

## 7. OWNERSHIP OF GOODS:

a) The goods shall remain the sole and absolute property of the Seller as legal and equitable owner until such time as the Buyer shall have paid to the Seller the contract price together with the full price of any other goods the subject of any contract between the Seller and the Buyer.

b) The Buyer acknowledges that until such time as the property in the goods passes to the Buyer he is in possession of the goods as a bailee and fiduciary agent for the Seller and the Purchaser shall store the goods in such a manner that they are clearly identifiable as the property of the Seller.

c) Until payment due under all contracts between the Buyer and the Seller had been made in full, in the event of sale of the goods by the Buyer:

- i) the Seller shall be entitled to trace all proceeds of sale received by the Buyer through any bank or other account maintained by the Buyer; and
- ii) the Buyer shall if requested by the Seller in writing to so assign its rights to recover the selling price of the goods from the third parties concerned. Such monies to be held separately by the Buyer as agent on behalf of the Seller.

d) The Seller may for the purpose of recovery of its goods enter upon any premises where they are stored or where they are reasonably thought to be stored and may repossess the same.

## 8. TERMS OF PAYMENT:

In the event of default in payment according to the agreed payment terms between the Seller and the Buyer – i.e. by the end of the month following the month of despatch of the goods the Seller shall be entitled without prejudice to any other right or remedy to suspend all further deliveries and to charge interest on any amount outstanding at the rate of 2% per month until payment in full is made (a part of a month being treated as a full month for the purpose of calculating interest).

## 9. SHORTAGES AND DEFECTS APPARENT ON DELIVERY:

a) It shall be the responsibility of the Buyer to inspect or arrange for an inspection of the goods on delivery whether the goods are delivered to the Buyer's premises or to the premises of the Buyer's customer or to a works site. If no such inspection is made the Buyer shall be deemed to have accepted the goods.

b) The Buyer shall have no claim for shortages or defects apparent on inspection unless:

- i) a written complaint is made to the Seller within three days of receipt of the goods specifying the shortage or defect; and
- ii) the Seller is within seven days of receipt of the complaint given an opportunity to inspect the goods and investigate the complaint before any use is made of the goods.

c) If a complaint is not made to the Seller as herein provided then in respect of such shortages or defects the goods shall be deemed to be in all respects in accordance with the contract and the Buyer shall be bound to pay for the same accordingly.

## 10. CLAIMS FOR DEFECTS NOT APPARENT ON INSPECTION:

a) The Buyer shall have no claim for defects not apparent on inspection unless the Seller is notified of defective workmanship or materials within twelve months from delivery of the goods. Provided that the goods have been installed and applied in accordance with any relevant recommendations made by the Seller, the Seller will at its option replace the goods or refund the net invoiced price in respect of the goods which have been shown to be defective. If the Seller does not supply substitute goods the Buyer shall be bound to accept such substituted goods in full satisfaction of the obligations of the Seller under the contract.

b) The Buyer shall in any event have no claim or set-off in respect of defects unless a written complaint is sent to the Seller as soon as the defect is noticed and no use is made of the goods thereafter or alteration made thereto by the Buyer before the Seller is given an opportunity to inspect the goods.

c) The Buyer is responsible for ensuring that the goods are fit for any particular purpose, and no warranty or condition of fitness for any particular purpose is to be implied into the contract.

## 11. LIABILITY:

Save as stated in Conditions 9 and 10 (and save in respect of death or personal injury resulting from the negligence of the Seller its servants or agents) the Seller shall not be liable for any claim or claims for direct or indirect consequential or incidental injury loss or damage made by the Buyer against the Seller whether in contract or in tort (including negligence on the part of the Seller its servants or agents) arising out of or in connection with any defect in the goods or their fitness or otherwise for any particular purpose or any act omission neglect or default of the Seller its servants or agents in the performance of the contract.

## 12. FORCE MAJEURE:

Notwithstanding anything herein contained neither the Buyer nor the Seller is to be held liable for any delay or failure to carry out the contract due wholly or in part to an act of God action by any Government whether British or foreign civil war strikes and/or lockouts wheresoever occurring fire trade disputes floods or unfavourable weather or any material becoming unavailable or irreplaceable (whether at all or at commercially acceptable prices) or any other circumstances beyond the control of the Seller.

## 13. SUB-CONTRACTING:

The Seller reserves the right to sub-contract the fulfilment of any order or any part thereof.

## 14. INSOLVENCY AND BREACH OF CONTRACT:

In the event that:

- a) the Buyer commits any breach of the contract and fails to remedy such breach (if capable of remedy) within a period of thirty days from receipt of a notice in writing from the Seller requesting such remedy; or
- b) any distress or execution is levied upon any of the goods or property of the Buyer; or
- c) the Buyer offers to make any arrangements with or for the benefit of its creditors or (if an individual) becomes subject to a petition for a bankruptcy order or (being a limited company) has a receiver appointed of the whole or any part of its undertaking property or assets; or
- d) an order is made or a resolution is passed or analogous proceedings are taken for the winding up of the Buyer (save for the purpose of reconstruction or amalgamation with insolvent and previously approved in writing by the Seller) the Seller shall thereupon be entitled without prejudice to its other rights hereunder forthwith to suspend all further deliveries until the default has been made good or to determine the contract and any unfulfilled part thereof or at the Seller's option to make partial deliveries. Notwithstanding any such termination the Buyer shall pay to the Seller at the contract rate for all the goods delivered up to and including the date of termination.

## 15. INDUSTRIAL PROPERTY RIGHTS:

If goods supplied by the Seller to the Buyer's design or specifications infringe or are alleged to infringe any patent or registered design right or copyright the Buyer will indemnify the Seller against all damages, costs and expenses incurred by the Seller as a result of the infringement or allegation. The Buyer will give the Seller all possible help in meeting any infringement claim brought against the Seller.

## 16. BUYER'S ERROR IN ORDERING:

In the event the Buyer orders incorrectly the Seller will be under no obligation to the Buyer to rectify or assist in rectifying the error.

## 17. LAW AND JURISDICTION:

The contract shall be subject in all respects to English Law and to the jurisdiction of the English Courts.
