PIPING SYSTEMS

Technical Information

For technical data including operating & control pressures, dimensions as well as the use of accessories, please refer to data sheets which are available in both printed and electronic (pdf) formats from the Coventry Sales Office (details on back cover).

For details of our range of plastics pipe, fittings and hand operated valves in PVC-U, PVC-C, ABS, PP, PE as well as our INSTAFLEX PB range, please request Price Lists from the Coventry Sales Office.

Important Note
The technical data given in this catalogue is for preliminary information purposes only and is published without guarantee. All pictures and drawings are for illustrative purposes only and should not be regarded as wholly accurate in every detail. We reserve the right to withdraw or to alter the specification of any product without notice. Please consult our General Conditions of Supply.

Product Range PVDF 2007

Materials used for industrial pipe work
The material polyvinylidenefluoride (PVDF)

General

Polyvinylidenefluoride (PVDF) is a semi-crystalline thermoplastic having outstanding mechanical, physical and chemical properties. These result from the chemical structure of PVDF. Polyvinylidenefluoride belongs to the class of fluorinated polymers, whose best-known representative is polytetrafluoroethylene (PTFE, trade name: Teflon®). PTFE is characterised by a superb heat resistance and the best chemical resistance of all polymers; a great disadvantage is that it is not melt processable - e. g. into fittings. PVDF, on the other hand, combines various advantages of PTFE with good workability into structural parts. The fluorine content in PVDF amounts to 59 % by weight.
PVDF from GF is characterised by a very good mechanical behaviour and high temperature resistance. Because of the exceptionally wide pressure / temperature range in which PVDF can be used, it has opened, in connection with the specific characteristics of this material, completely new areas of application in plastic piping fabrication. These include applications in the semi-conductor, chemical and pharmaceutical industry, electroplating, paper and cellulose processing, the automotive industry and water treatment.

Pipes, fittings and valves of PVDF are uncoloured and opaque (milky, translucent).
By avoiding the addition of any additives, the outstanding characteristics of the material remain to the fullest extent, especially concerning the chemical resistance and physiological harmlessness.
Some of the advantages of PVDF:

- outstanding mechanical properties, even at high temperatures
- excellent chemical resistance
- no electrochemical corrosion
- long service life, even under intensely corrosive conditions
- outstanding resistance against UV and ³-radiation
- very pure material by implementing without additives
- no support of microbial growth
- physiologically harmless
- secure jointing by high-quality welding technology
- smooth inner surface
- very low heat conductivity
- excellent flame retardant properties

PVDF properties (reference values)

Characteristics	Value	Units	Test Standard
Density	1.78	g/cm³	EN ISO 1183
Yield stress at 23 °C	> 51	N/mm²	EN ISO 527-1

Colour	opaque	-	-
Limiting oxygen index (LOI)	44	%	ISO 4589-1

High purity properties

Due to the excellent stability of the PVDF molecule, it is one of the very few materials that can be processed, welded and used under severe conditions without the use of additives (no pigments, thermostabilisers, processing aids or fillers are used in the GF piping grades). This makes it the material of choice for applications that demand a very high purity of the medium and have stringent requirements stipulating that the materials which come in contact with the medium do not leach contaminants.

The PVDF raw materials used by GF fulfil the most rigid requirements of the semiconductor and pharmaceutical industry regarding high purity. In addition, products made of PVDF exhibit a very smooth surface. Leach out tests according to SEMI57 are done regularly for quality control.

For SYGEF®Plus products, only virgin raw material is used.

For details regarding the properties relevant for the market segments, Semicon and Life Science, please see our SYGEF®Plus specification:

Design of industrial piping systems
Application area of pipes and fittings
Pressure/temperature diagram for PVDF

The following pressure/temperature diagram for PVDF pipes and fittings is valid for a lifetime of 25 years.

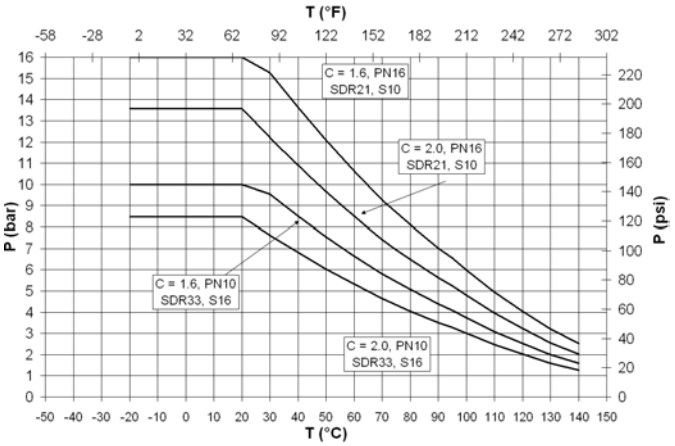
The design factor of 2.0 (respectively 1.6) recommended by GF is incorporated.

It can be used for water or media resembling water, in other words, media which have no derating factor regarding the chemical resistance.

Remark: Please take into account the pressure/temperature diagrams for our valves. Because of the construction and/or sealing material used, differences are possible when compared with pipes and fittings. This information can be found in the planning fundamentals of the relevant types of valves.

Attention: This diagram can only be used for applications with liquids!

In case of long-term applications at continuous pressure with temperatures above 100 °C, please contact your GF representative.



P Permissible pressure in bar, psi

T Temperature in °C, °F

Application example for the material PVDF

For continuously changing conditions of temperature or pressure the Miner's rule can be applied. The following example, an application in the pharmaceutical industry, show the calculation steps necessary:

Calculation basis:

Piping Series S10

Design factor: C = 2.0

Required operating lifetime 15 years

Main application:

Purified water (PW) at 25 °C and 5 bar pressure.

Steam Sterilisation:

Saturated steam at 135 °C and 2.2 bar pressure for 30 minutes daily.

The Miner's rule (calculation method for cumulative damage) is used for applications with varying conditions during their expected lifetime.

This takes into account the amount of time spent at each of the operating conditions:

$$T_x = \frac{100 \cdot T_1 \cdot T_2}{a_1 \cdot T_2 + a_2 \cdot T_1}$$

a1 a2 % of time spent at each condition

T1 T2 lifetime at the several operating conditions (pressure and temperature constant)

Tx calculated lifetime at intermittent load

for the above example the lifetimes are given as :

$T_1 \geq 50$ years for the water

$T_2 = 4471$ hrs for the steam

The % of time spent at each condition is :

$a_1 = 97.9$ %

$a_2 = 2.1$ %

from the equation :

$T_x = 214608$ hrs = 24.5 years

It can be seen that this is higher than the specified operating lifetime and is therefore acceptable.

Design of industrial piping systems
Application area of valves

The engineering design of valves supplied by GF is based on the following design standards:

- EN ISO 16135: Industrial valves - Ball valves of thermoplastic materials
- EN ISO 16136: Industrial valves - Butterfly valves of thermoplastic materials
- EN ISO 16137: Industrial valves - Check valves of thermoplastic materials
- EN ISO 16138: Industrial valves - Diaphragm valves of thermoplastic materials
- EN ISO 16139: Industrial valves - Gate valves for thermoplastic materials
- EN ISO 21787: Industrial valves - Globe valves of thermoplastic materials

The valves easily comply with the requirements set out in the above standards. In many cases, they exceed the requirements most notably for pressure / temperature / load capacity.

It should be noted that depending on the engineering design, at high temperatures there may be a reduction in the application limits of pipes and fittings, whether this be in the amount of the permitted pressure or the maximum temperature.

The technical data concerning

- pressure temperature diagram
- pressure loss
- flow characteristics
- k_v values
- average values for screw fastenings
- mounting and maintenance
- electric or pneumatic actuators

are to be found under the planning fundamentals of the respective valves.

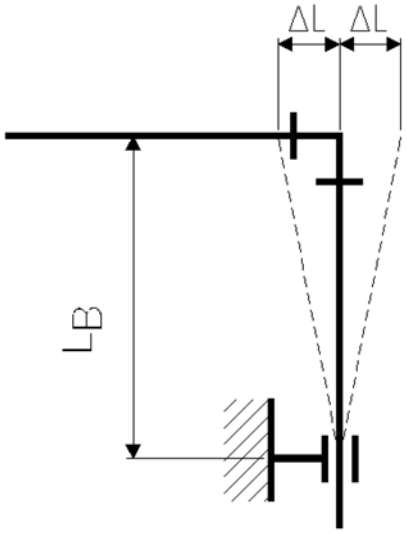
Processing and installations
Change in length and flexible sections

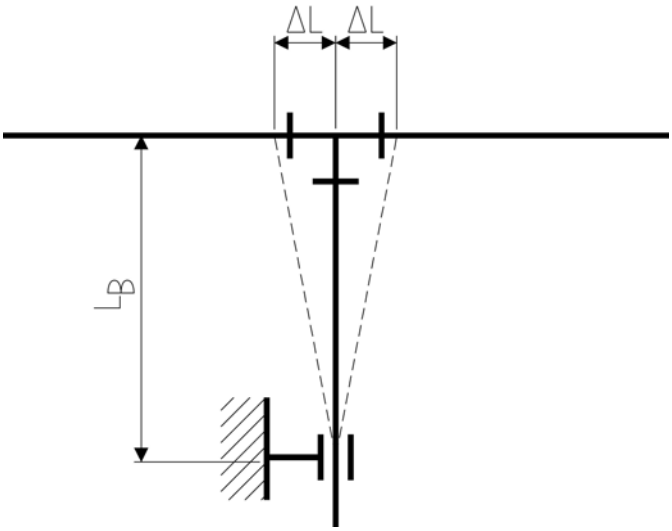
General
Thermoplastics are subject to greater thermal expansion and contraction than metals. Pipes installed above ground, against walls or in ducts, especially those exposed to temperature variations, require changes in length to be taken up in order to prevent extra strain on the pipes. Length changes can be taken up by:

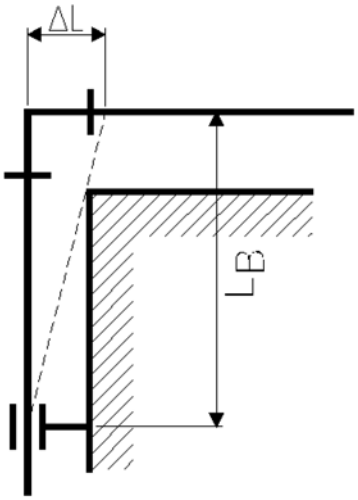
a) flexible sections
b) compensators

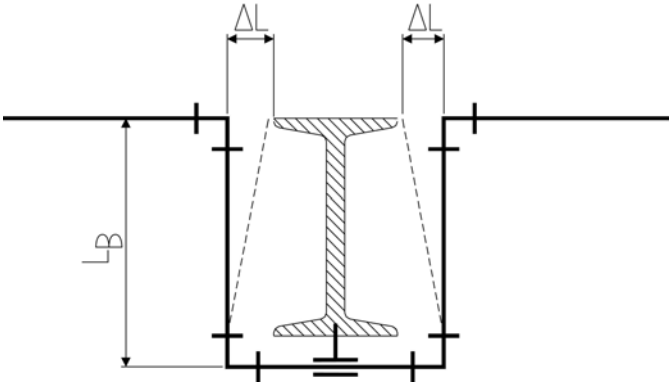
Flexible sections are the most common solution, being the simplest and the most economical. The calculations for and the positioning of flexible sections are therefore described in detail.

Fundamentals
The low modulus of elasticity of thermoplastics allows changes in length to be taken up by special pipe sections, where pipe supports are positioned so that they can take advantage of the natural flexibility of the material. The length of such sections is determined by the diameter of the pipeline and the extent of the thermal expansion to be compensated. In order to simplify design and installation, the temperature of the pipe wall, a third factor, will not be taken into account, especially since most pipes are installed in an environment with ambient temperature in the range of 5-25 °C.









Flexible sections arise naturally at any branching or change in direction of the pipeline. The movement H of the flexible section as a result of a change ΔL in the length must not be restrained by fixed pipe brackets, protrusions wall, girders or the like.

Calculation of change in length and flexible sections

The **change in length caused by temperature** can be calculated using the following formula:

$$\Delta L = L \cdot \Delta T \cdot \alpha$$

with:

- ΔL = temperature-related change in length (mm)
- L = length of the pipe section (m)
- ΔT = difference of temperature (K)
- α = coefficient of linear expansion (mm / m K)

Some coefficients of linear expansion of polymers:

Material	**α = mm/m*K**
ABS	0.10
PA	0.10
PE	0.15 - 0.20
PP	0.16 - 0.18
PPS	0.15
PVC-U	0.07 - 0.08
PVC-C	0.06 - 0.07
PVDF	0.12 - 0.18

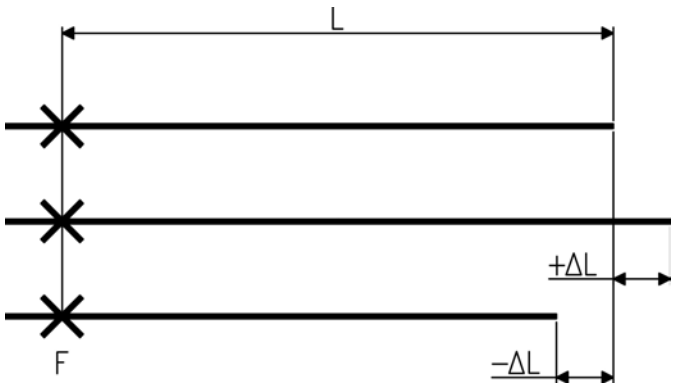
Important: If the operating temperature is higher than the installation temperature, then the pipe expands. If, on the other hand, the operating temperature is lower than the installation temperature, then the pipe contracts in length.

The installation temperature must therefore be incorporated into the calculations as well as the **maximum** and **minimum** operating temperatures.

1. Pipe at installation temperature
2. Operating temperature above installation temperature
3. Operating temperature below installation temperature

Important:

- It is preferable to use + to indicate expansion of the pipe and - to indicate contraction.
- The larger change in length is the one to be used for determining the required length of the flexible section.



Calculating the length of the flexible section

The required length of the flexible section can be calculated using the following formula:

$$L_B = \sqrt{\frac{3 \cdot d_a \cdot \Delta L \cdot E_{cm}}{\sigma_b}}$$

with:

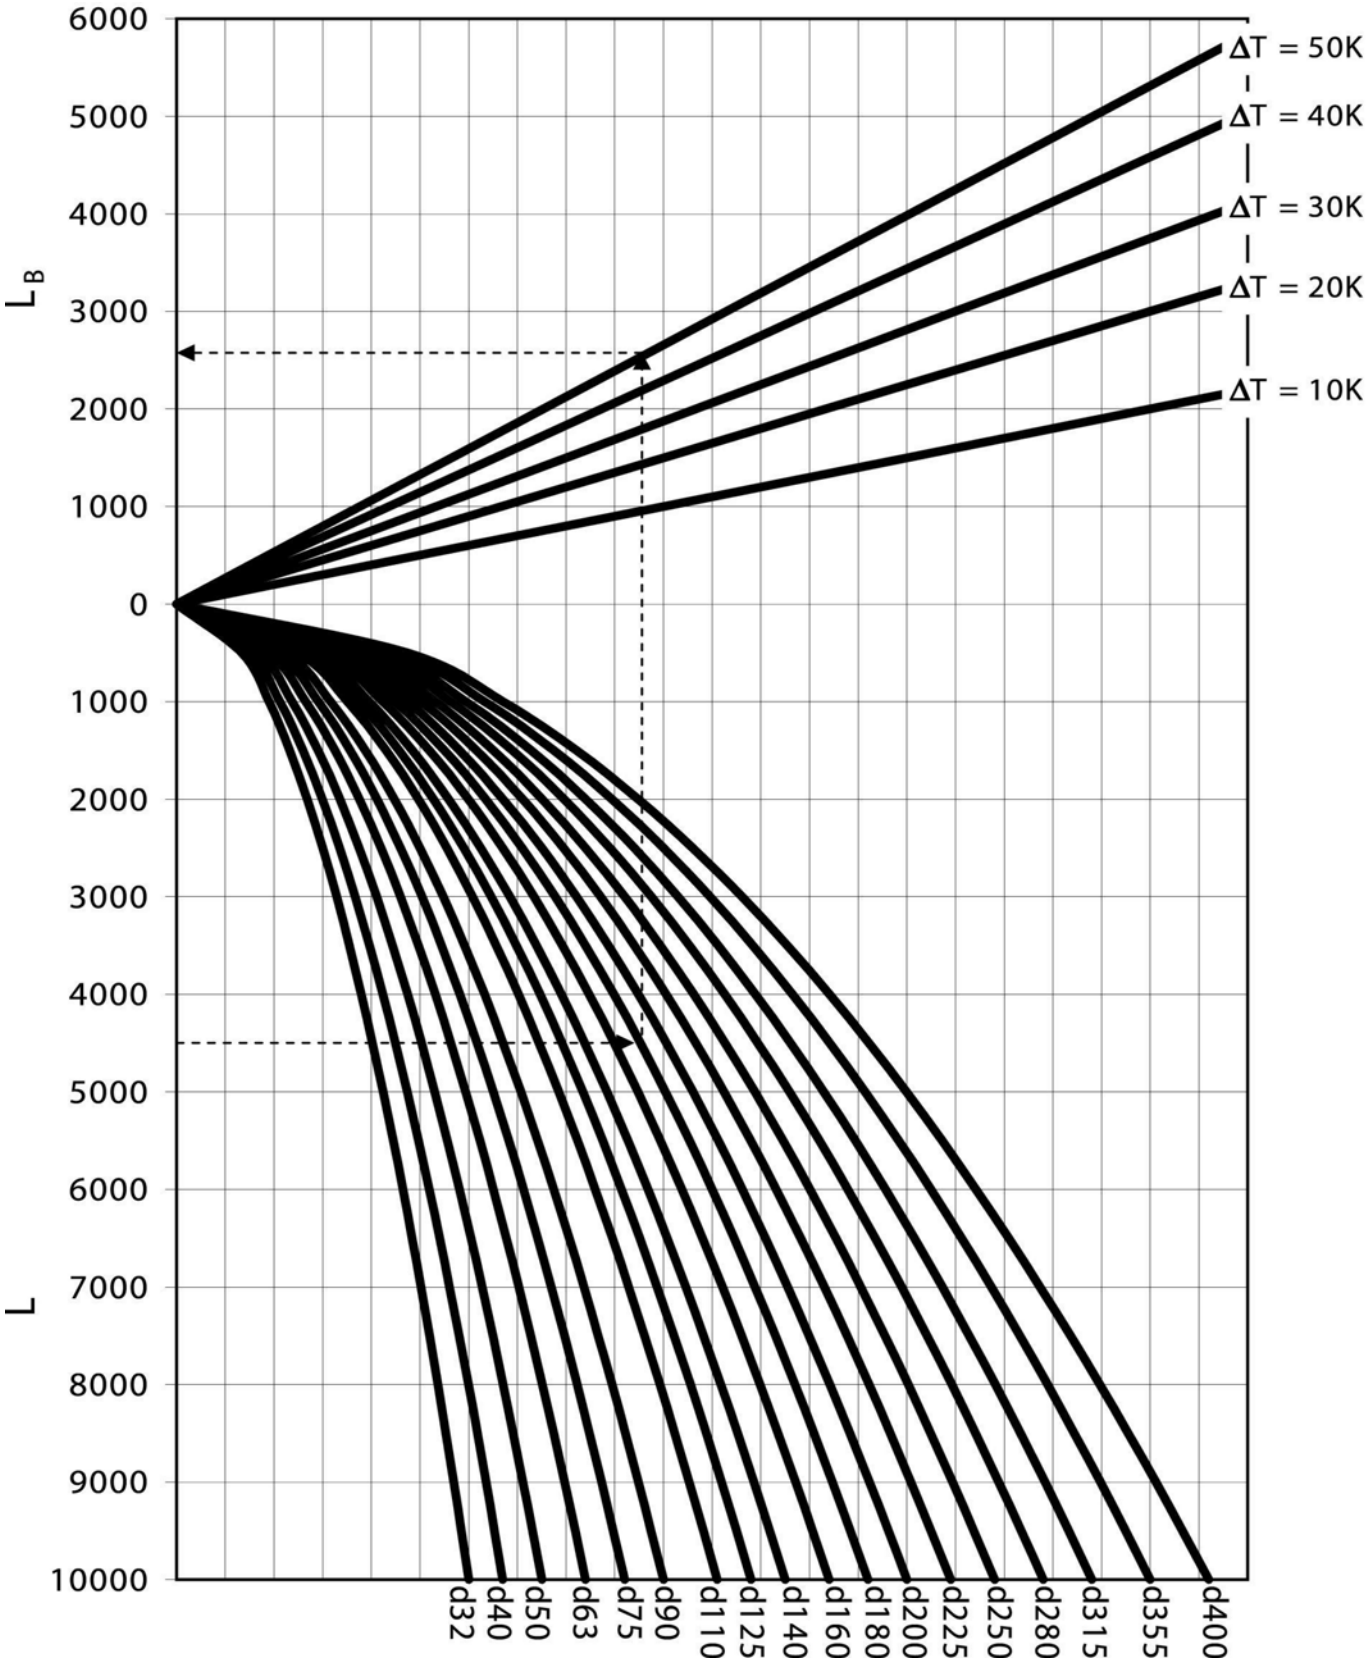
- da = pipe outside diameter (mm)
- ΔL = change in length (mm)
- E_{cm} = average bending creep modulus for t = 25 a (N/mm²)
- σ_b = permitted bending stress for t = 25a (N/mm²)

Boundary conditions for using the diagram

For easy determination of the required length of flexible section please use the following diagram. Please take into account the given boundary conditions.

- Assembly temperature T_M = 20 °C
- T_B Operating temperature
- $\Delta T = T_B - T_M$
- allowable bending stress 15 % of σ_v
- PN 6 .. 16

Diagram for determining flexible sections of PVDF pipelines



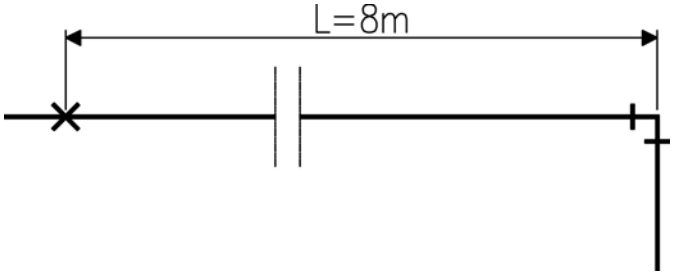
L Length of the pipe section in mm

L_B Required length of flexible section in mm

Example: Determining the required flexible section

Calculating the relevant change in length

The example of an ABS process pipe serves to illustrate the procedure:
Length of piping from the fixed point to the branch point where the change in length is to be taken up: L = 8 m.
Installation temperature: T_M = 20 °C
Max. working temperature: T_1 = 35 °C
Min. working temperature: T_2 = -20 °C



Expansion of the section during heating
$+\Delta L_1 = L \cdot \Delta T_1 \cdot \alpha = 8 \cdot 15 \cdot 0.10 = 12$ mm

Contraction during cooling
$-\Delta L_2 = L \cdot \Delta T_2 \cdot \alpha = 8 \cdot 40 \cdot 0.10 = 32$ mm

Temperature differences
$\Delta T_1 = T_1 - T_M = 15$ °C
$\Delta T_2 = T_2 - T_M = -40$ °C

Maximum change in temperature chosen
$\Delta T = 40$ °C

Determining the length of the flexible section for ABS

The values needed to determine the necessary length are:

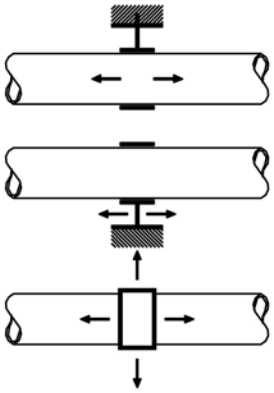
The maximum change in temperature from the 0-position (i. e. from the position in which the pipe was installed). But remember that the pipe could just as well contract as expand.
The pipe diameter d.
The length of the pipe section L.

With these values the required length of the flexible section can be read off from the diagram for ABS.

Continuing with the example introduced before and supposing that an ABS pipe with d = 50 mm is installed, the maximum change in temperature being $\Delta T = 40$ °C, the required length of the flexible section is seen directly from the diagram to be L_B = 1300 mm.

Processing and installations
Pipe bracket spacing and support of pipelines

Pipe bracket requirements



The inner diameter of the pipe bracket must exceed the outside diameter of the pipe in order not to interfere with the free movement of the pipe as a result of expansion or contraction. The inside edges of the pipe brackets must be such that the pipe surface cannot be damaged.

KLIP-IT pipe brackets

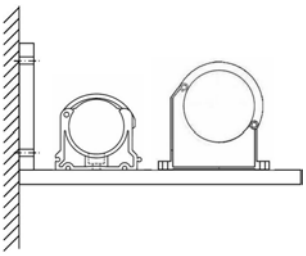
GF pipe brackets and clamps satisfy these requirements. These robust plastic pipe brackets can be used not only under rigorous operating conditions, but also where the pipework is subject to aggressive media or atmospheric conditions. They may be used for all materials of pipes.
Remark: Don't use KLIP-IT pipe brackets as fixed points!

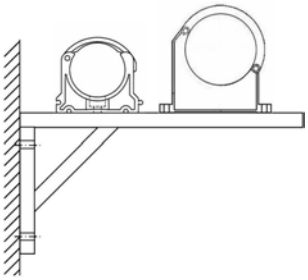
d 16 to d32

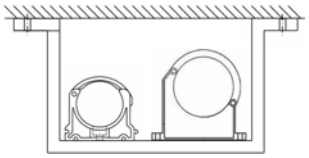
d 40 to d 160

d 90 to d 400

Attention: Starting from the dimension d90 the KLIP-IT brackets must be installed standing, like shown in the assembly examples. The support distances given in the following, specified for the KLIP-IT tubing clamps, apply only to this mounting method.





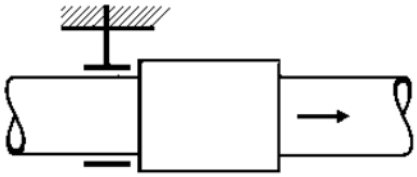


Arranging Loose Brackets

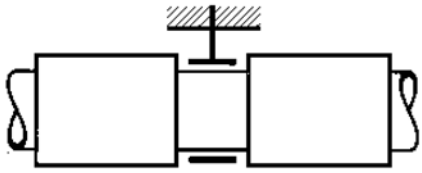
Axial movement of the pipeline must not be prevented by fittings placed next to pipe brackets or by any other component affecting the diameter of the pipe.

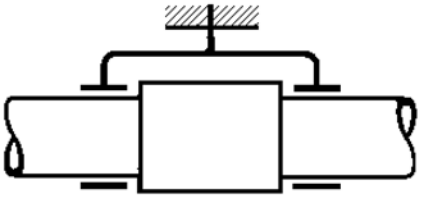
Sliding brackets and hanging brackets permit the pipe to move in different directions. Attaching a sliding block to the base of the pipe bracket permits free movement of the pipe along a flat supporting surface. Sliding and hanging brackets are needed in situations where the pipeline changes direction and free movement of the pipe must be allowed.

Arranging fixed points



Placing a pipe bracket immediately adjacent to a fitting restricts movement due to changes in length to one direction (one-sided fixed point).

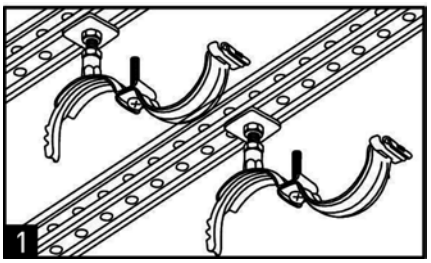




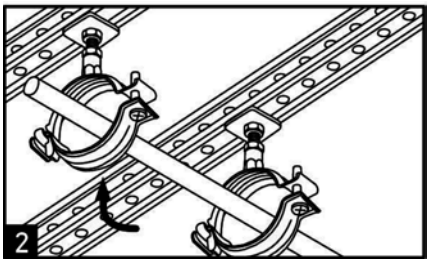
If, as is usually the case, it is necessary to allow changes in both directions, then the pipe bracket must be located between two fittings or a double bracket must be used.

Pipe brackets must be robust and mounted firmly to be able to take up the forces arising from changes in length in the pipeline. Hanging brackets or KLIP-IT pipe brackets are unsuitable for use as fixed points

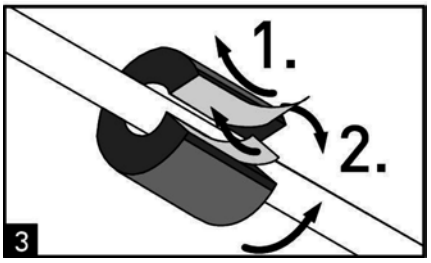
Pipe brackets for cold insulation (MIP)



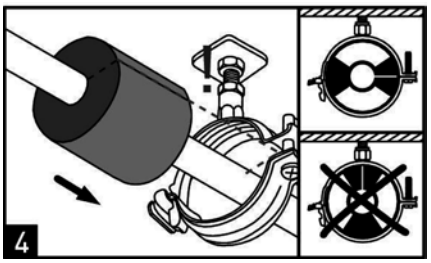
Open handle



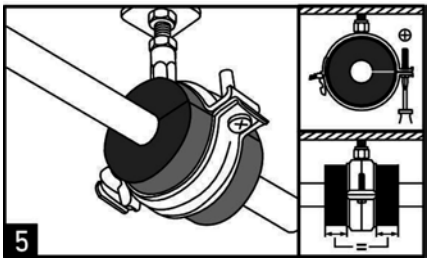
Insert pipe
Close handle with quick-action clamp



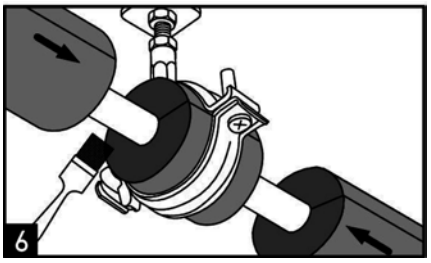
Assemble insulation
1. Take off foil
2. Press area of contact



Move insulation into the bracket.
Attention! Make sure the insulator is positioned correctly.



Tighten the screw



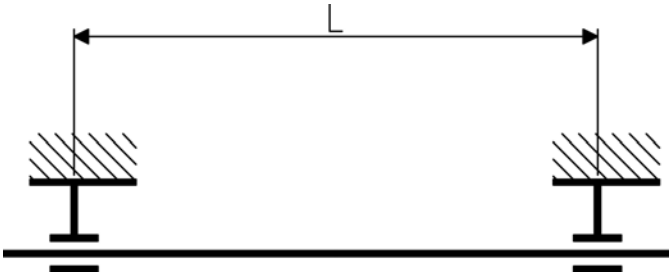
Coat areas of contact with adhesive and bond them

Using the tables for pipe bracket spacing

Plastic pipelines need to be supported at certain intervals depending on several factors: the material, the average pipe wall temperature, the density of the medium transported and the size and wall thickness of the pipe. Determining the spacing between pipe brackets is based on the permissible deflection of the pipe between consecutive brackets.

Caution!
The values given in the tables apply only to pipelines which are freely movable in the axial direction.

Pipelines which are fastened tightly in the axial direction (fixed installations) must be checked for buckling. In most cases, this leads to a reduction of the maximum inner pressure and shorter distances between the support brackets. Furthermore, the forces that act on the fixed points must also be taken into consideration. For assistance, please contact your nearest GF representative.



Pipe bracket spacing for PVDF for liquids with a density of 1 g/cm³

d mm	Pipe bracket spacing L for pipes SDR33 / S16 / PN10 and SDR21 / S10 / PN16 in mm at pipe wall temperature:

180	2300	2200	2150	2050	1950	1900	1800	1600	1400	1200
200	2400	2350	2250	2150	2100	2000	1900	1700	1500	1300
225	2550	2500	2400	2300	2200	2100	2000	1800	1600	1400
250	2650	2600	2500	2400	2300	2200	2100	1900	1700	1500
280	2850	2750	2650	2550	2450	2350	2250	2000	1800	1600
315	3000	2950	2850	2750	2600	2500	2400	2150	1900	1650
355	3200	3100	3000	2850	2750	2650	2500	2250	2000	1750
400	3400	3300	3200	3050	2950	2800	2650	2400	2100	1800

For other SDR the values should be multiplied by the following factors:

SDR21 / S10 / PN16 in the dimensional range d63 to d400 with 1.08
SDR17 / S8 / PN20 in the entire dimensional range with 1.12

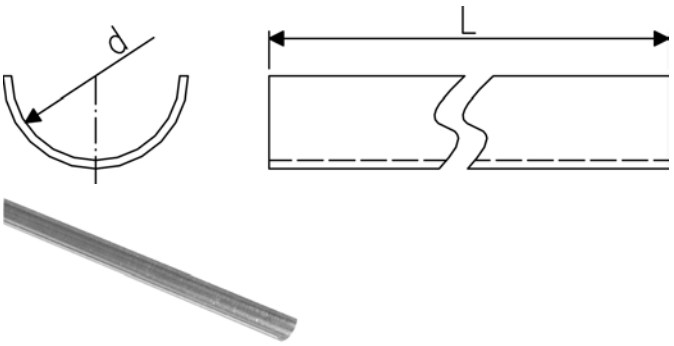
Pipe bracket spacing for lines running vertically can be increased by 30 % with respect to the values in the table, i. e. table values multiplied by 1.3.

Pipe bracket spacing for PVDF for fluids of a density other than 1 g/cm³

If the liquid to be transported has a density not equal 1 g/cm³, then the bracket spacing in the table above should be multiplied by the factor given in the following table.

Density of the fluid in g/cm³	Factor for pipe bracket spacing
1.25	0.96
1.50	0.92
< 0.01	1.48 for SDR33 / S16 / PN10 1.36 for SDR21 / S16 / PN16 1.31 for SDR17 / S8 / PN20

Installing closely spaced pipe brackets: Carriers



Continuous support may be more economical and practicable than pipe brackets for horizontal or vertical pipework, especially for small diameter pipes and in areas with high temperatures.

In order to avoid inadmissible loadings on the pipelines ensure during assembling an overlapping of the carriers in the pipe brackets.

The following table indicates the spacing distances when using carriers. These values apply regardless of the type of piping material or the temperature.

d **mm**	**Spacing of supports when using carriers** **mm**
16	1600
20	1750
25	1900

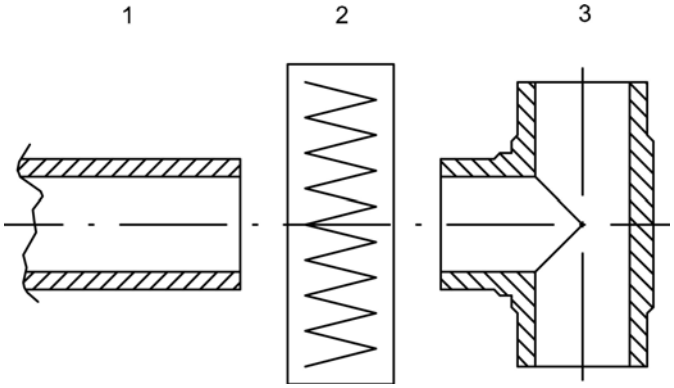
40	2150
50	2300
63	2500
75	2600
90	2750
110	2900

Jointing technology
Fusion jointing of PVDF
IR Plus® fusion jointing of PVDF piping systems
Fusion jointing method

In infrared (IR) fusion jointing the fusion areas of the components being joined (pipes, fittings, valves) are heated to fusion temperature without contact to the heating element and jointed by means of mechanical pressure without using additional materials.

The principle of fusion jointing



1 Pipe
2 Heating element
3 Fitting

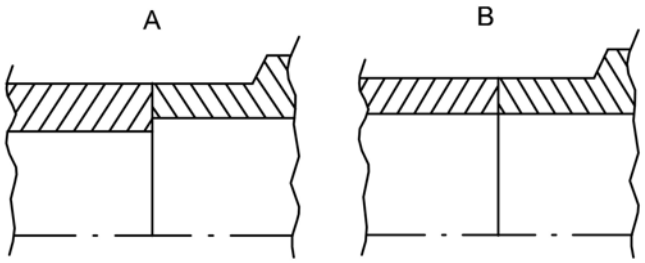
The resulting fusion joints are homogeneous and display the following characteristics:

- non-contact heating of the jointing components eliminates the risk of contamination and inhomogenities;
- smaller jointing beads due to adjustment of jointing pressure path prior to the fusion process itself, i. e. elimination of the equalisation process;
- adjustment of the jointing pressure path also ensures excellent reproducibility of the fusion joints;
- low-stress fusion joints due to very uniform heating by means of IR radiation.

General requirements

The basic rule is that only similar materials can be fusion jointed. The components to be joined must have the same wall thicknesses in the fusion area. Maximum permissible wall displacement: 10 %.

Only same wall thicknesses in the fusion area



A incorrect
B correct

IR fusion jointing must only be performed by personnel trained in the use of this method. Training is provided world-wide by qualified GF IR Plus® welding instructors.

Tools required

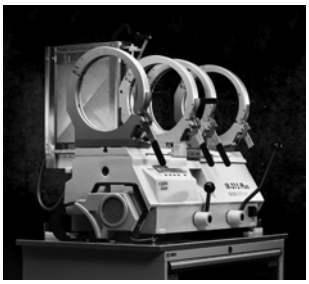
Infrared fusion jointing requires a special jointing machine in addition to the tools normally used for plastic pipework construction (pipe cutters, etc.).

GF supplies three types of IR Plus® fusion jointing machines:

IR63 Plus®: for fusion joints in the size range d20-63 mm

IR225 Plus®: for fusion joints in the size range d63-225 mm

IR315 Plus®: for fusion joints in the size range d250-280-315 mm



General conditions

Protect the area of the fusion joint from adverse weather conditions, such as rain, snow or wind. The permitted temperature range for IR Plus® fusion jointing is between +5 °C and +40 °C. Outside this range, suitable action must be taken to ensure that these conditions are maintained. It must also be ensured that the components being joined are in this temperature range.

Preparing the fusion joint and operating the IR fusion jointing machine

In principle, IR fusion jointing machines do not require any special preparation, other than to ensured that all components being joined are clean.

Operation of the IR machines is defined exactly in the operating instructions, but we strongly recommend to attending a 1-day training course to become a qualified IR welder.

Properties and characteristics of IR fusion joints

Non-contact heating

The components being joined are heated uniformly and without contact to the ideal fusion temperature by infrared radiation.

A defined gap between the heating element and the end faces minimises the risk of contamination of the jointing surface. Contamination of the heating element by plastic particles is thus also eliminated.

Reduced bead formation

The fusion bead produced during jointing is considerably reduced without any loss of quality. Bead-forming equalisation is eliminated by non-contact softening of the end faces. The minimal, defined bead is only formed during the jointing process. The fusion area thus has improved flow dynamics, low clearance volume and greater throughput area.

Reproducible jointing processes

The jointing path controls the jointing pressure and thus the fusion process. The high reproducibility of the joints is assured by the clearly defined and controlled process sequence.

Clear, simple operator guidance

Clear, unambiguous operator guidance via the liquid crystal display leads the user interactively through the fusion process in logical operating steps.

Welding report/traceability

The welding parameters for the relevant welding operations can be read out directly via various interfaces on the machine. It is possible to print these out on paper (commercially available printers), on labels or to employ electronic data output (PCMCIA card).

This automatically provides an accurate record with all the essential fusion parameters for each individual fusion joint.

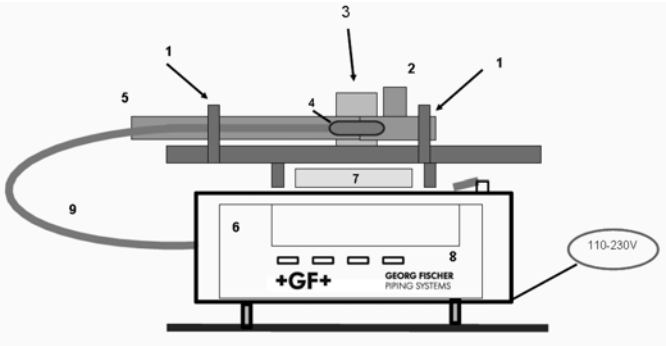
Jointing technology
Fusion jointing of PVDF
BCF® Plus fusion jointing of SYGEF® PVDF piping systems
Fusion jointing method

The fusion jointing process consists in transmitting precisely defined thermal energy to the pipe and fitting ends being joined by means of half-shell heating elements.

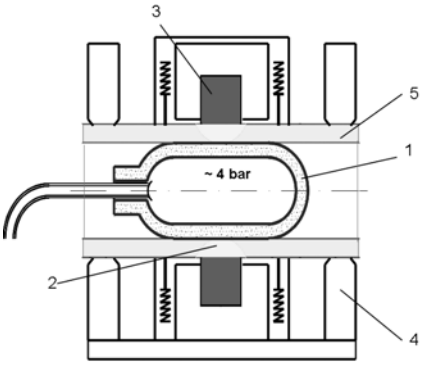
At the same time an elastic, pressurised bladder supports the inside surface of the fusion zone in order to prevent the formation of an internal fusion bead.

Holding the melted thermoplastic under controlled pressure ensures ideal, homogeneous fusion of the plastic components.

Fully automatic process control of the fusion jointing process with a fusion jointing machine developed in-house by GF permits very simple handling and reproducible fusion quality.



1 Pipe clamping element
2 Fitting
3 Heating element with fitting - clamping device
4 Pressurised bladder
5 Pipe
6 Compressor for bladder
7 Cooling air blower
8 Control unit control panel
9 Compressed air supply



1 Pressurised bladder
2 Welding zone
3 Heating element
4 Clamping position
5 Pipe / Fitting

General requirements

SYGEF® fittings and SYGEF® pipes are suitable for working pressures up to 16 bar at 20 °C (water). SYGEF® diaphragm valves are designed for a maximum working pressure of 10 bar at 20 °C (water). Refer to the chapter on pressure/temperature diagrams for details of permissible working pressures.

Tools required

BCF jointing requires the SYGEF® HP BCF® jointing machine in addition to the tools normally used for plastic pipework construction (pipe cutters, etc.).

Preparing the fusion joint and operating the BCF® Plus fusion jointing machine

In principle, BCF® Plus fusion jointing machines do not require any special preparation, other than to ensure that all components being joined are clean.

Operation of the BCF® Plus machines is defined exactly in the operating instructions, but we strongly recommend attending a 1-day training course to become a qualified BCF® welder.

Properties and characteristics of BCF® Plus fusion joints

Welding free from beads and crevices

The result of the jointing process is a surface similar to the actual pipeline components, free from beads or crevices. There are therefore no dead spaces, the surface roughness lies in the range Ra 0.25.

Reproducible jointing processes

The high reproducibility of the joints is assured by the clearly defined and controlled process sequence.

Clear, simple operator guidance

Clear, unambiguous operator guidance via the liquid crystal display leads the user interactively through the fusion process in logical operating steps.

Welding report/traceability

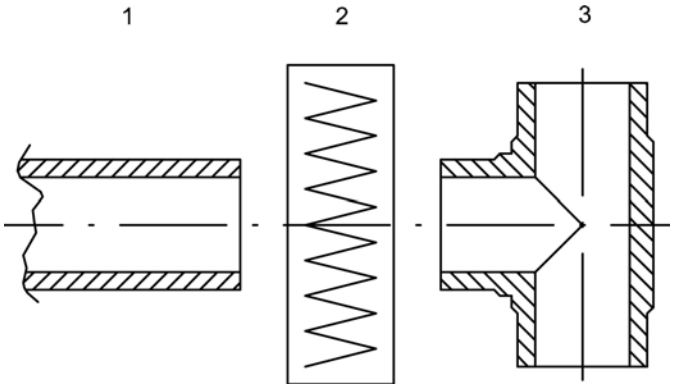
The welding parameters for the relevant welding operations can be read out directly via various interfaces on the machine. It is possible to print these out on paper (commercially available printers), on labels or to employ electronic data output (PCMCIA card).

This automatically provides an accurate record with all essential fusion parameters for each individual fusion joint.

Jointing technology
Fusion jointing of PVDF
Butt fusion jointing of PVDF piping systems
Butt fusion jointing method

The fusion areas of the pipes and fittings are heated to fusion temperature and joined by means of mechanical pressure, without using additional materials. A homogeneous joint results. Butt fusion must only be carried out with fusion jointing machines which allow the jointing pressure to be regulated. Details of the requirements for machines and equipment used for fusion jointing thermoplastics are contained in DVS 2208 Part 1. The drawing to the right illustrates the principle of fusion jointing.

The principle of fusion jointing



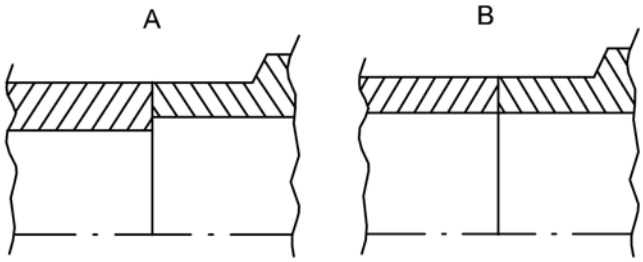
1 Pipe
2 Heating element
3 Fitting

General requirements

The basic rule is that only similar materials can be fusion jointed. For best results, only components which have a density between 1.70 and 1.80 g/cm³ and a melt flow index in the range from MFR 230/5 1.0 to 25 g/10 min should be fusion jointed. This requirement is met by PVDF butt fusion fittings from GF.

The components to be joined must have the same wall thicknesses in the fusion area.

Join only components with similar wall thicknesses



A incorrect
B correct

Heated tool butt fusion jointing may only be performed by adequately trained personnel.

Tools required

Butt fusion jointing requires a special jointing machine in addition to the tools normally used for plastic piping construction (pipe cutters, saw with cutting guide). The fusion jointing machine must meet the following minimum requirements:

The clamping equipment must hold the various parts securely without damaging the surfaces. Possible ovality can be largely compensated by centred clamping of the components to be joined. It must also be possible to hold all parts firmly in alignment.

The machine must also be capable of face planing the fusion surfaces of pipes and fittings.

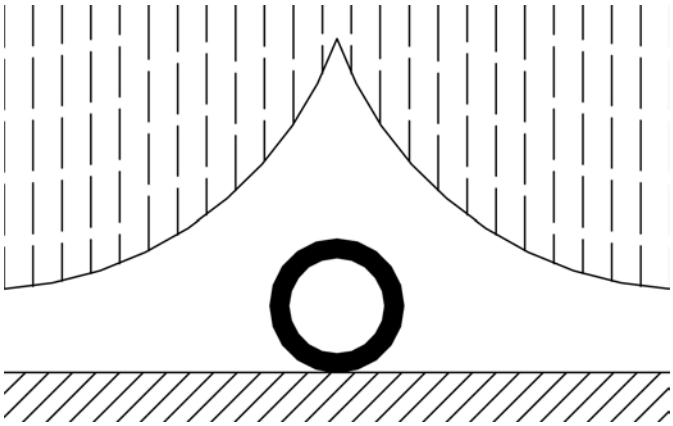
The fusion jointing machine must be sufficiently solid to be able to absorb the pressures arising during the fusion procedure without detrimentally deforming the joint.

The heating surfaces of the heating element must be flat and parallel. The temperature variation over the working area must not exceed 10 °C. The machine should be set up and operated according to the manufacturer's instructions.

The fusion procedure detailed below including the preparation is based on DVS 2207-15 ”Welding of thermoplastics - Heated tool welding of pipes, pipeline, components and sheets out of PVDF”.

General conditions

Protect the area of the fusion joint from adverse weather conditions, such as rain, snow and wind. At temperatures below +5 °C or above +45 °C, measures must be taken to ensure that the temperature in the working area is in the range required for satisfactory jointing and does not hinder the necessary manual tasks.



Protect the fusion area

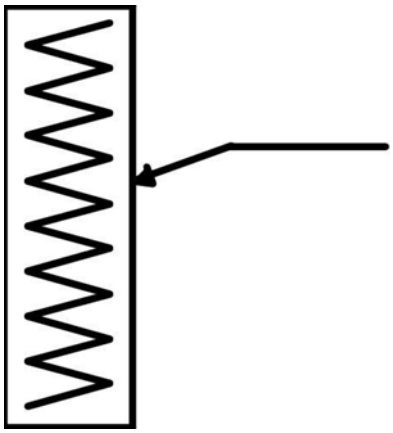
Screening the fusion area can ensure a more even temperature distribution on the entire circumference of a pipe subject to direct sunlight. The pipe ends at the opposite end of the fusion areas should be sealed whenever possible to reduce to a minimum the cooling of the fusion surfaces which can be caused by wind.

Preparation of the fusion joint

The quality of the fusion process is governed by the care with which the preparatory work is carried out. This part of the procedure therefore deserves special attention.

Heating tool

Set the temperature of the heating element to 240 °C. Check the temperature. The fusion temperature should be between 232 °C and 248 °C.

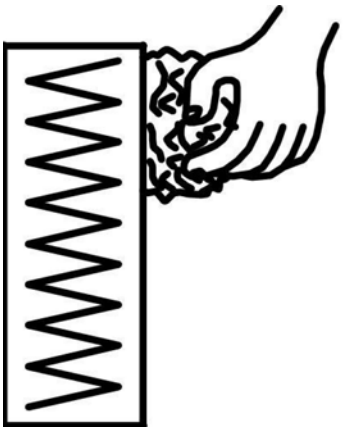


Check the temperature

Temperature of heating element 232 °C to 248 °C

To test the thermostat, check temperature before commencing the fusion jointing. This is best carried out with the help of a digital thermometer. But only thermometers with a sensor for measuring surface temperature are suitable.

To ensure it is being maintained at the correct level the fusion temperature should be checked from time to time during the jointing work. The temperature of the heating element is particularly sensitive to wind.



Clean the heating element

Clean the heating element with dry, clean paper before each fusion joint!

Protect the working surface of the heating element from becoming soiled. Clean both faces of the heating element with dry, lint-free paper before each fusion joint. Protect the heating element from wind, damage and soiling during the intervals between making fusion joints.

Planing and subsequent checking

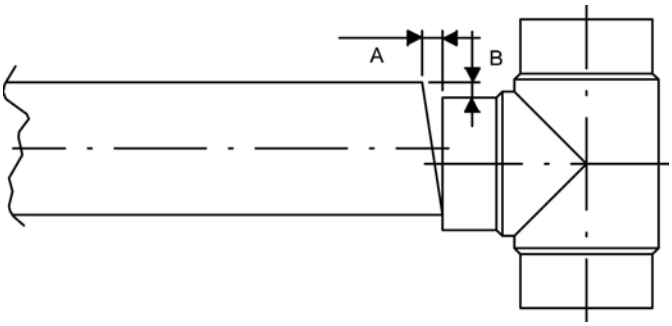
Before machining the fusion surfaces, make sure that the tools and the work pieces are clean and grease-free even beyond the fusion zone; if necessary, clean with a cleaning fluid.

All the components clamped into the fusion jointing machine are planed simultaneously with the planer provided. The shavings should not be thicker than ≤ 0.2 mm. This step is completed when there is no unmachined area left on either of the parts to be joined. This is normally the case when no more shavings come

off the machined surface.

Remove any shavings which may have fallen into the pipe or fitting with e. g. a brush. The fusion surfaces should not be touched by hand under any circumstances. Otherwise they must be cleaned with cleaning fluid.

Once they have been machined, the parts are moved together until they touch. The gap between the two parts must not exceed 0.5 mm at any point.



A max. gap: 0.5 mm

B max. displacement: 10 % of wall thickness

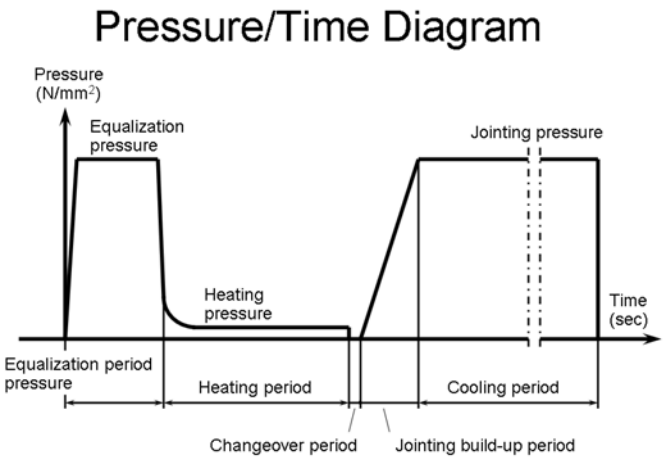
Check the wall alignment and gap

The alignment of the two parts should be checked at the same time. A possible misalignment on the outside must not exceed 10 % of the thickness of the wall. If this limit is exceeded, a better clamping position is to be sought, e. g. by rotating the pipe. In such a case, however, the surface must be re-planed.

Important: The fusion surfaces must be planed immediately prior to the jointing.

Setting the fusion pressure

Fusion jointing requires different pressures to be applied during equalisation and jointing on the one hand and during the heat soak period on the other. Please see the following diagram.



The specific jointing pressure required for equalisation and fusion can be found in the following table with the heating and cooling periods. The table lists the times for various wall thicknesses. Interpolate for intermediate values.

The force needed for equalisation and jointing (F_A) is given by the product of the fusion area and the specific jointing pressure (F_A = A * p). The force (F_B) required to move the pipe must be added to this. (F_{tot} = F_A + F_B). This latter force includes the intrinsic resistance of the machine and the resistance of the axially mobile pipe or fitting clamped in it. The resistance of longer pipes should be reduced as far as possible by placing rollers beneath them. The kinetic force (F_B) should not exceed the jointing force (F_A).

Equalise and heat

20.0 .. 25.0	1.7 .. 2.0	240 .. 290	5	11 .. 13	25 .. 32

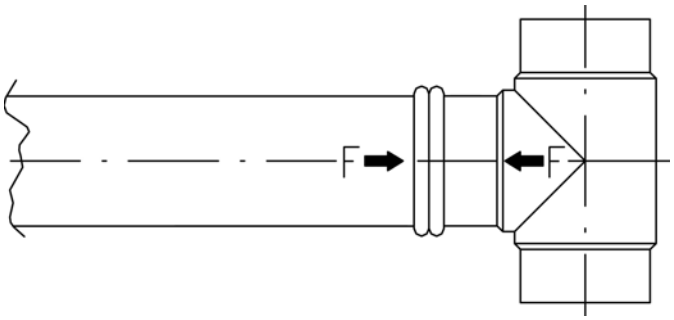
1) in accordance with DVS 2207-15

2) The times are affected by the pipe wall thickness, the outside temperature and wind strength.

Determine the values to be set for equalisation and jointing on the basis of the information above, bearing in mind the instructions from the manufacturer of the fusion jointing machine before commencing the fusion process.

Fusion jointing procedure

Once it has attained the fusion temperature, position the heating element in the fusion jointing machine. Press the parts to be joined against the heating element with the force required for equalisation until the entire circumference of each of the jointing faces rests completely against it and a bead (see the table) has formed. Reduce the equalisation pressure almost to 0 (p ~ 0.01 N/mm²). The heating time listed in the table is measured from this moment.



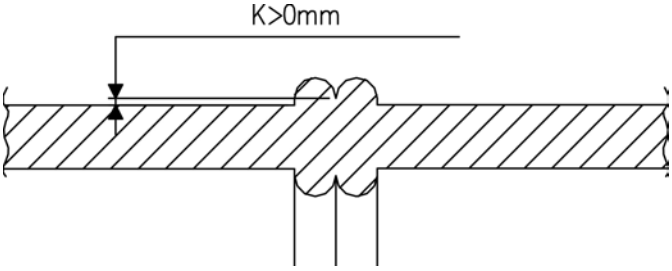
Join and cool

Leave parts in the fusion jointing machine at fusion pressure until the end of the cooling period!

Once the heating period has elapsed, remove the parts from the heating element which should then be removed without touching the jointing surfaces and push the parts together immediately. The changeover time must not exceed the value listed in the table. Pay particular attention during jointing that the parts be moved together swiftly until the surfaces are about to touch.

Then they should be moved together so that they are in contact along the entire circumference. Next the pressure should be increased rapidly to the present jointing pressure within the period of time specified in the table. This pressure must be maintained during the entire cooling period. Adjustment may be necessary, especially shortly after the jointing pressure has been attained.

The jointed parts must stay in the fusion jointing machine under jointing pressure until the end of the cooling period specified in the table.



Fusion check

A bead should form around the entire circumference of the pipe. K in the diagram to the left should always be positive.

Carrying out the pressure test

All fusion joints must be allowed to cool completely before pressure testing, i. e. as a rule wait about 1 hour after the last joint has been completed.

Jointing technology
Fusion jointing of PVDF
Socket fusion jointing of PVDF piping systems
Socket fusion jointing method

In this form of fusion jointing, which requires heating tools, the pipe end is inserted into the socket of the fitting; no additional material is used. The pipe end and fitting socket are heated to fusion temperature using a heating bush and a heating spigot, respectively, and are then pushed together.

Details of the requirements for machines and equipment used for fusion jointing thermoplastics are contained in DVS 2208 Part 1.

The pipe end, fitting socket and heating tools correspond in such a way that the necessary jointing pressure is attained during jointing, resulting in a homogeneous joint.

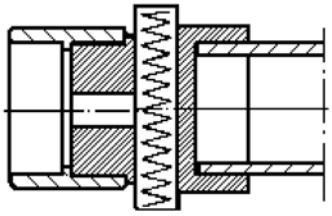
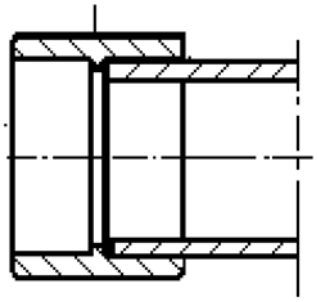
Heating



Finished joint



General requirements

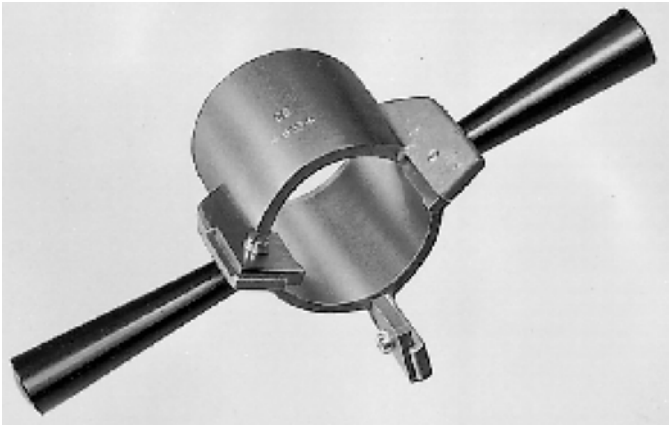
The basic rule is that only similar materials can be fusion jointed. For best results, only components which have a density between 1.70 and 1.80 g/cm³ and a melt flow index in the range from MFR 230/5 1.0 to 25 g/10 min should be fusion jointed. This requirement is met by PVDF socket fusion fittings from GF.

In socket fusion, attention must be paid to the minimum wall thicknesses of the pipes. The following table in this introduction contains details.

Tools required

Apart from the tools normally used in plastic piping construction, such as pipe cutters or a saw with a cutting guide, the socket fusion jointing method requires certain special tools.

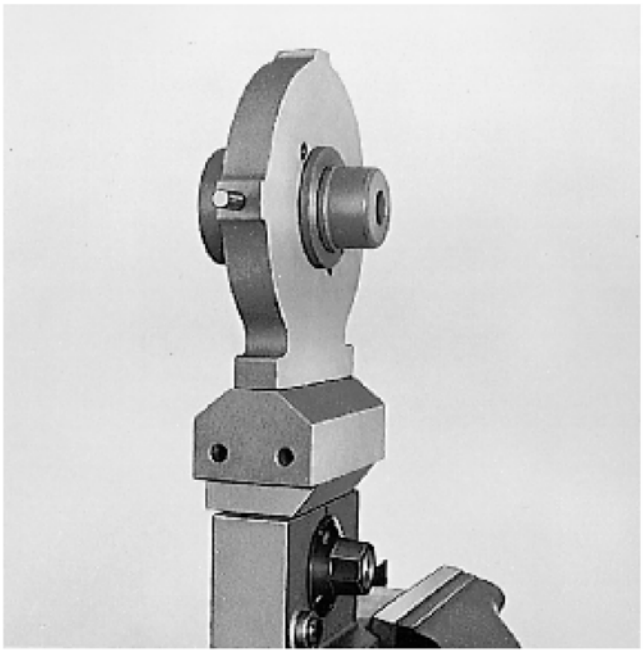
Important: The tools described here may be used for GF socket fusion fittings made of PE and PP as well as PVDF.



Pipe peeling and chamfering tool

This is used to calibrate the pipe end. This reduces the force exerted to push the pipe into the heating bush, while preventing damage to the surface coating of the heating bush. At the same time the pipe end is chamfered and the insertion depth marked.

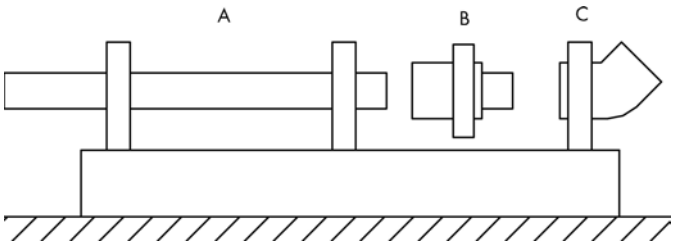
Note: Further information on the fusion jointing equipment hire service and training courses are available from GF.



Heating element for manual fusion jointing

The element is heated electrically. The heating bush and spigot are removable. A separate pair is required for each pipe size.

Important: The surfaces of the heating tool which come into contact with the pipe or the fitting must have a non-stick coating.



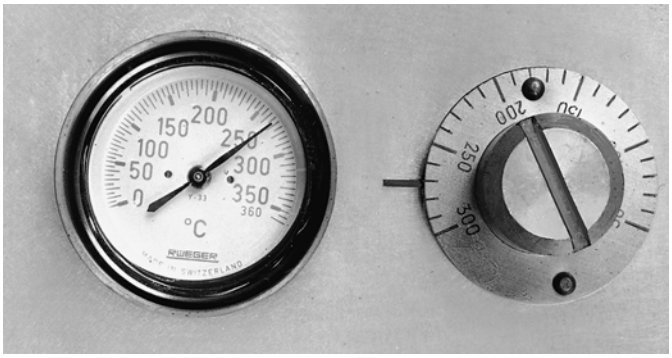
A Pipe
B Heating element
C Fitting

Fusion jointing machine

A fusion jointing machine is recommended for fittings with a diameter of d = 50 mm or more. It is also better to use a machine for smaller joints if there is a large number to be made.

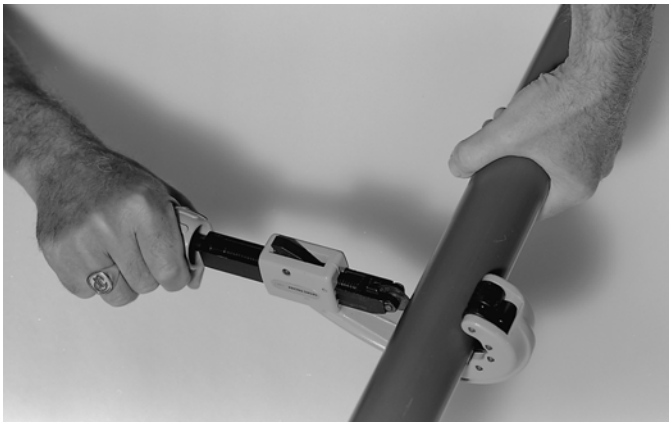
The machine should be set up and operated according to its manufacturer's instructions. The procedure detailed below (including the preparation) is for fusion jointing with the help of a manual jointing tool.

Preparation of the fusion joint



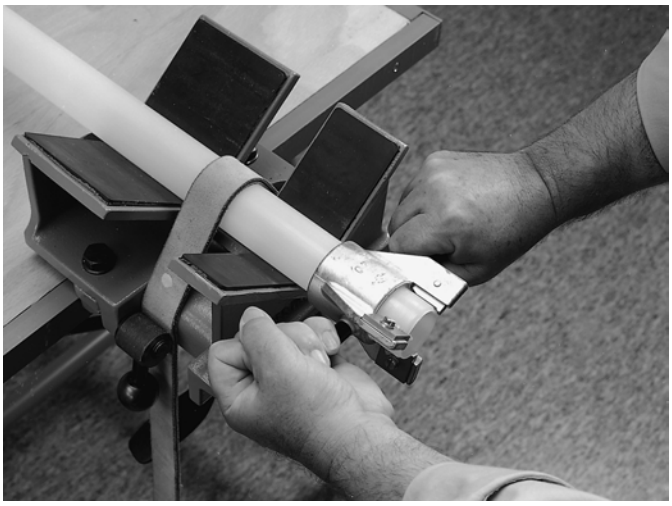
Set the temperature of the heating tool to 260 °C. Check the temperature. The fusion temperature must be between 250 °C and 270 °C. To test the thermostat, check the fusion temperature from time to time on the outside of the heating bush, using a fast acting thermoprobe or tempil sticks (253 °C or 274 °C). This is particularly important when working in strong wind.

Use a clean cloth or dry paper to clean the heating bush and the heating spigot. The tools must be cleaned after making each fusion joint.



Cut the pipe square using a cutter for plastic pipes and deburr the inside edges with a knife.

Make sure that the tools and pipes are clean and grease-free even beyond the fusion zone; if necessary, clean with a cleaning fluid.



For pipes ranging in size from **d** = 20 to **d** = 110 mm peel the pipe end until the blades are flush with the pipe end.

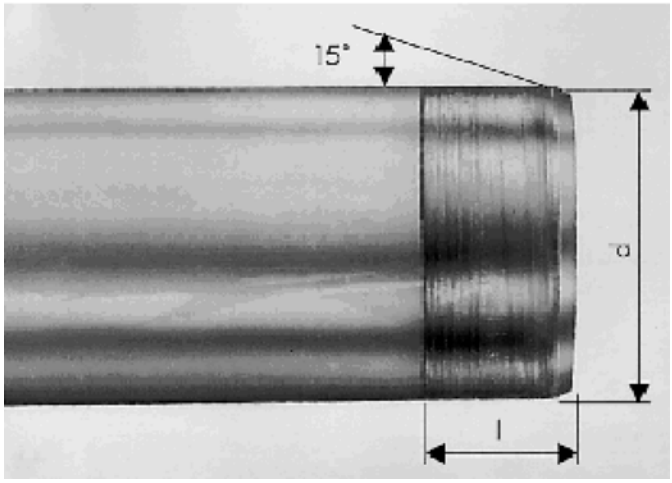
Should ovality of the pipe prevent the peeling tool from being properly applied, the pipe must first be rounded (e. g. in a vice or with a screw clamp).

Use a scraper to complete the peeling of any area where ovality impairs the effectiveness of the peeling tool.

If the peeling tool can be pushed onto the pipe without removing any material, then the dimensional accuracy of the pipe's outside diameter and of the peeling tool should be checked.

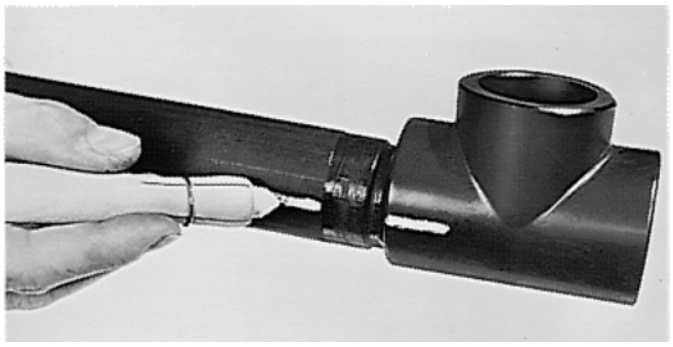
Contact GF for resharpening or replacing the blades. Should this work be carried out independently, use a mandrel gauge to adjust the blades to the following diameters.

Outside pipe diameter d (mm)	Peeled diameter mm	Peeling length l (mm)
16	15.85-15.95	13
20	19.85-19.95	14
25	24.85-24.95	16
32	31.85-31.95	18
40	39.75-39.95	20
50	49.75-49.95	23
63	62.65-62.95	27
75	74.65-74.95	31
90	89.65-89.95	35
110	109.55-109.95	41



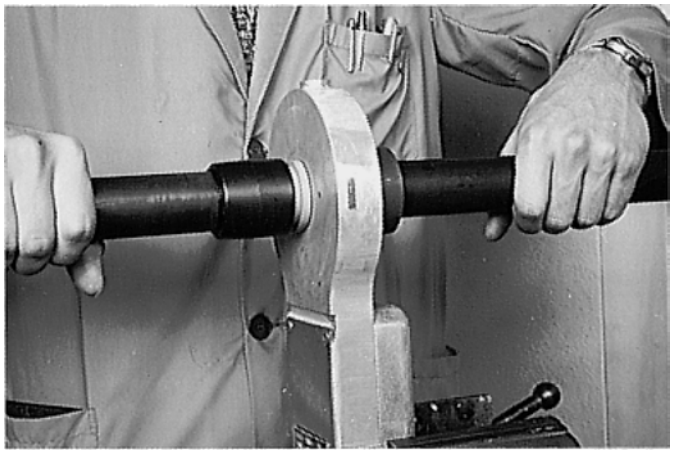
The peeling length l corresponds to the length of the peeling blades.
For pipes of diameter d = 16 mm, chamfer about 2 mm of the pipe end at an angle of 15 °. Prepare about 15 mm of the pipe end with a scraper. Mark off the jointing length of 13 mm on the pipe.

Thoroughly clean the fitting socket with absorbent paper and cleaning fluid (e. g. Tangit cleaner). Use fresh paper each time.



Mark the required position on both the pipe and the fitting before jointing.

Fusion jointing procedure

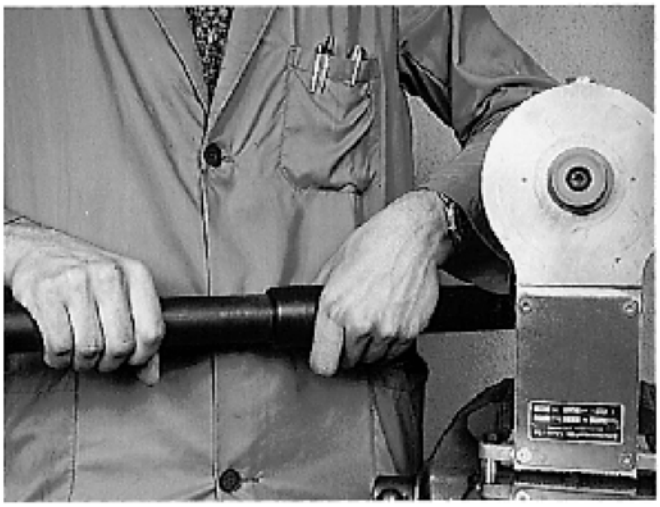


Heating

Quickly push first the fitting onto the heating spigot to the correct depth and then the pipe into the heating bush axially, without twisting, and hold firmly. The heating times in the table below are measured from this point on. Fusion joints should not be used for pipes whose walls are thinner than those listed in the table.

Heating times and minimum wall thicknesses for socket fusion joints					
Pipe outside diameter mm	**Minimum pipe wall thickness mm**	**Heating time sec**	**Change (Max.-time) sec**	**Cooling fixed sec**	**Cooling total min**
16	1.5	4	4	6	2
20	1.9	6	4	6	2
25	1.9	8	4	6	2
32	2.4	10	4	12	4
40	2.4	12	4	12	4
50	3.0	18	4	12	4
63	3.0	20	6	18	6
75	3.0	22	6	18	6
90	3.0	25	6	18	6
110	3.0	30	6	24	8

The temperature and heating time must be strictly observed.



Jointing (by hand)

Pull the fitting and pipe from the heating tools with a snap off action as soon as the heating period has elapsed. Paying attention to the alignment marks, immediately push them together axially without twisting. Hold them together for the same duration as the heating period.

Pressure testing

All fusion joints must be allowed to cool completely before pressure testing, i. e. as a rule wait about an hour after the last joint has been completed.

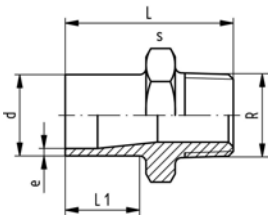
Transition Fittings Butt Fusion

Adaptor Nipple, male thread - R, PN 16, PVDF-Standard



Model:

- With butt fusion spigot and BSP tapered male thread
- Connection to plastic thread only
- Do not use thread sealing pastes that are harmful to PVDF
- Avoid stresses when installing and large changes in temperature

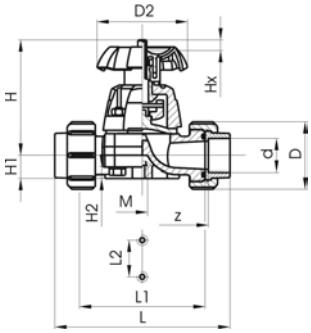
Diaphragm valves



SYGEF® standard
Diaphragm valve type 314 PVDF
With fusion sockets metric

Model:

- Diaphragm PTFE with EPDM backing diaphragm (FDA compliant)
- For easy installation and removal
- Short overall length

Option:

- Handwheel with built-in locking mechanism (standard version is nonlockable)

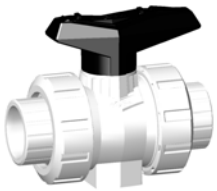
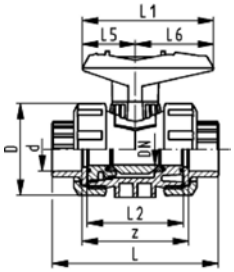
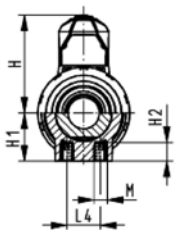
Ball valves type 546



DN10/15 - 50





SYGEF® standard
Ball valve type 546 PVDF
With mounting inserts
With fusion sockets metric

Model:

- For easy installation and removal
- z-dimension, valve end and valve nut are **not compatible** with type 346 (DN10/15-50) resp. type 370 (DN65-100)
- Ball seals PTFE
- Integrated stainless steel mounting inserts

Option:

- Individual configuration of the valve (see form)
- Multifunctional module with integrated limit switches
- Pneumatic or electric actuators from +GF+

SYGEF® standard
Ball valve type 546 PVDF
With mounting inserts
With fixed flanges PVDF serrated metric

Model:

- For easy installation and removal
- z-dimension, valve end and valve nut are **not compatible** with type 346 (DN10/15-50) resp. type 370 (DN65-100)
- Ball seals PTFE
- Integrated stainless steel mounting inserts
- Overall length EN 558-1

Option:

- Individual configuration of the valve (see form)
- Multifunctional module with integrated limit switches
- Pneumatic or electric actuators from +GF+

Handle extension 546 PVC-U metric

Model:

- For Ball Valve Type 546
- Composed of adapter sockets for handle connection and stem connection
- PVC-U pipe in suitable length has to be obtained on site

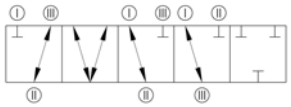
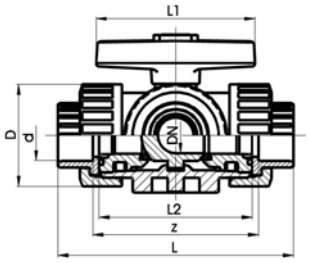
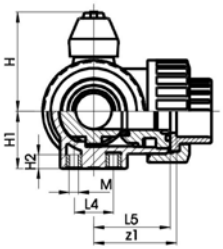
Ball valves type 343







SYGEF® standard
3-Way ball valve type 343 PVDF
Horizontal/L-port
With fusion sockets metric

Model:

- L-port ball
- For easy installation and removal
- Ball seals PTFE
- Pneumatic or electric actuator available separately
- Angle of operation 360°, without turn limiter

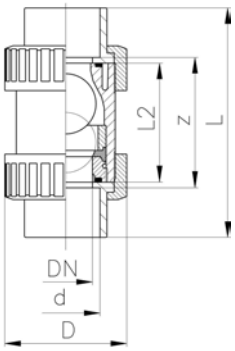
Ball check valves

SYGEF® standard
Ball check valve type 360 PVDF
With fusion sockets metric

Model:

- For easy installation and removal
- Ball is sealing at a minimum water column 1m
- Vibration free even at high flow velocity
- FPM ball seal



Attention; make sure the inner diameter is not reduced by leaving residues of the fusion (danger of turbulence)

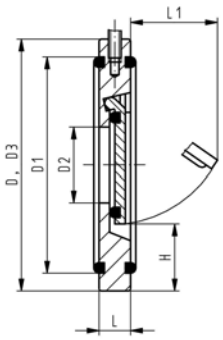
Wafer check valves



SYGEF® standard
Wafer check valve type 369 PVDF
Without springs

Model:

- Supporting eyelets for simple fitting
- Suitable for vertical and horizontal mounting

Installation instruction:

- Installation between metric flange adaptors
- Centering by body diameter
- Sealing with special flange gasket (except DN32, o-ring)
- A stabilizing zone of at least 5 times nominal diameter (DN) should be provided before and after the wafer check valve (10 times DN is recommended)
- No direct installation on pump flange or following bend allowed

Note:

- **In order to install the wafer check valves properly, Georg Fischer recommends flange adaptors of the next larger diameter of the valve (e.g. wafer check valve d90 with two flange adaptors d110)**

SYGEF® standard
Wafer check valve type 369 PVDF
With V4A springs

Model:

- Supporting eyelets for simple fitting
- Suitable for vertical and horizontal mounting

Installation instruction:

- Installation between metric flange adaptors
- Centering by body diameter
- Sealing with special flange gasket (except DN32, o-ring)
- A stabilizing zone of at least 5 times nominal diameter (DN) should be provided before and after the wafer check valve (10 times DN is recommended)
- No direct installation on pump flange or following bend allowed

Note:

- **In order to install the wafer check valves properly, Georg Fischer recommends flange adaptors of the next larger diameter of the valve (e.g. wafer check valve d90 with two flange adaptors d110)**

Union (FPM white), PN 16, PVDF-HP

Model:

- FDA compliant
- supplied with sealing
- d75, d90 and d110 with buttress shaped thread
- * version without BCF collar (won't be replaced)

- Please see installation instruction

Note:

- Products, except d75-110, will be replaced in 1. quarter 2007

SYGEF® PLUS
Diaphragm valve type 317
Flanged connection metric

Model:

- DN 15-65 with backing flange
- DN 80-150 with fixed flange
- Overall length according to EN 558-1
- Diaphragm PTFE with EPDM backing diaphragm (FDA compliant)

Option:

- Handwheel with built-in locking mechanism (standard version is nonlockable)

*** DN80 and DN150 fixed flanges metric and Inch ANSI B16.5**

SYGEF® PLUS
Diaphragm valve type 319
With butt fusion spigots

Model:

- **H**igh **T**emperature **R**esistent (HTR)
- Diaphragm PTFE with EPDM backing diaphragm (FDA compliant)
- Suitable for butt and BCF® fusion
- Welding dimension: PN16
- With additional sealing element FPM white (FDA compliant)
- Red handwheel
-

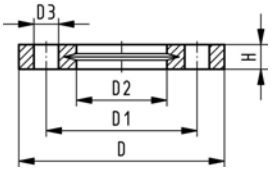
SYGEF Exhaust Accessories

Backing Flange, PP-V



Backing Flanges, PP-V for Butt Fusion Systems metric

Model:

- Modern full-plastic flange PP-GF (30 % glass-fibre reinforced)
- With V-groove which applies force evenly on collar
- With integrated bolt retainers as an assembly aid
- Connecting dimension: ISO 7005 PN 10, EN 1092 PN 10, DIN 2501 PN 10, BS 4504 PN 10

[1]) Suitable for socket- and butt fusion systems (no pictograph on flange)

Pipe Clips Type 060, PP metric

Model:

- For mm pipes d90-400
- Material: Clip and safety clip PP black, UV resistant
- Accidental opening of the safety clip is not possible
- **Minimum order quantity: standard packaging SP or gross packaging GP**
- Clip and safety clip are not assembled in the packaging.
- Pipes with flanges can be installed directly

System Orientated Fusion Machines

IR-63 Plus® Fusion Jointing Machine and Accessories

IR-63 Plus® Fully-Equipped Machine

Fully-equipped fusion jointing machine for welding SYGEF® Standard, SYGEF® Plus, DEKAPROP®, PROGEF® Natural, PROGEF® Plus, PE 100 in dimensions d 20-63 mm with integrated remote welding unit.

Supply:

1-phase AC (50/60 Hz) 230 V L/N/PE

Delivery includes:

- Machine housing complete (1 pcs.)
- Heater assembly (1 pcs.)
- Remote weld device (1 pcs.)
- Facing tool (1 pcs.)
- Transport box (1 pcs.)
- Pipe stop (1 pcs.)
- Clamping inserts d 20-63 mm (8 pcs. per dimension)
- End caps PE d 20-63 mm (4 pcs. per dimension)
- Power supply cable 230 V (1 pcs.)
- Extension cable for remote weld device (1 pcs.)
- Extension cable for heater (1 pcs.)
- Extension cable for facing tool (1 pcs.)
- Cleaning brush No. 8 (1 pcs.)
- Hexagon key 3 mm (1 pcs.)
- Hexagon key 4 mm (1 pcs.)
- Heater protection shield (1 pcs.)
- Clamping unit extension (8 pcs.)
- Socket wrench (facing blades) (1 pcs.)
- Screw driver, Size 0 (1 pcs.)
- HP-Accessory Tray (1 pcs.)
- Manual (1 pcs.)

IR-225 Plus® Fusion Jointing Machine and Accessories

IR-225 Plus® Fully-Equipped Machine with HP Working Table (HP = High Purity)

Fully-equipped fusion jointing machine for welding SYGEF® Standard, SYGEF® Plus, DEKAPROP®, PROGEF® Natural, PROGEF® Plus, PE 100 in dimensions d 63-225 mm.

Supply:

1-phase AC (50/60 Hz) 230 V L/N/PE or 3-phase AC (50/60 Hz) 400 V/230 V L1/L2/L3/N/PE

Delivery includes:

- Machine base (1 pcs.)
- Heater assembly (1 pcs.)
- Facing tool (1 pcs.)
- Working table, HP (1 pcs.)
- Movable clamping units (1 pcs.)
- Clamping inserts d 63-225 mm (8 pcs. per dimension)
- End caps PE d 63-225 mm (4 pcs. per dimension)
- Transportation lock (1 pcs.)
- Pipe stop (1 pcs.)
- Hexagon key 5 mm (1 pcs.)
- Hexagon key 6 mm (1 pcs.)
- Combination ring /open-jaw wrench 13 mm (1 pcs.)
- Cleaning brush (1 pcs.)
- Connecting cable 400 V - 230 V (1 pcs.)
- Ball for lever (1 pcs.)
- Manual (1 pcs.)

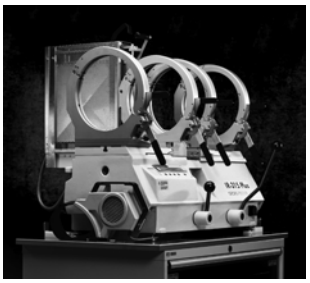
IR-315 Plus® Fusion Jointing Machine



IR-315 Plus® Fully-Equipped Machine with HP Working Table (HP = High Purity)

Model:

- Fully-equipped fusion jointing machine for welding SYGEF® Standard, SYGEF® Plus in dimensions d 250-315.
- **Only a rental pool machine**

d-d [mm]		Code	
250 - 315	On request	-	

Accessories for the IR plastic fusion jointing machines

IR Plus® Win Weld

- The PC data transfer software makes it possible to manage and evaluate easily the recorded fusion data as required.
- **incl. Recordcard**

	Code	kg	Pieces	
WIN 2000/XP	**790 131 471**	0.151	1	
WIN 95/98/Me	**790 131 472**	0.220	1	

IR Plus® Recordcard

- Fusion data from the machine can be stored on an exchangeable protocol card (record card) with a storage capacity of approx. 900 fusion protocols. It allows a paperless documentation.

BCF® Plus Plastic Fusion Jointing Machine

BCF® Plus fully equipped machine d 20 - 63 mm

Fully-equipped machine for bead and crevice free jointing of SYGEF® Standard, SYGEF® Plus, PROGEF® Natural of the dimensions d 20-63 mm with integrated remote welding unit.

Supply:

1-phase AC (50/60 Hz) 115 / 230 V L/N/PE

Delivery includes:

- Machine housing (1 pcs.) incl. remote welding unit (1 pcs.)
- Transport box (1 pcs.)
- HP working table (1 pcs.)
- Heating stations d 20-63 mm (6 pcs.)
- Clamping units small (2 pcs.) with clamping inserts d 20-63 mm (24 pcs.)
- Facing tool small (1 pcs.) with facing inserts d 20-63 mm (6 pcs.)
- Facing tool support (1 pcs.)
- Hose box (1 pcs.) incl. air hose (1 pcs.)
- Supporting tools small d 20-63 mm (2 pcs.)
- BReT (1 pcs.)
- Hose cutter (1 pcs.)
- Air hose reducer (6-4 mm) (1 pcs.), air hose socket (4-4 mm) (1 pcs.)
- Extension cable (1 pcs.)
- Manual (1 pcs.)

GEORGE FISCHER SALES LIMITED ("George Fischer")
CONDITIONS OF SALE (FOR GOODS AND SERVICES)

GEORGE FISCHER SALES LIMITED ("George Fischer")
CONDITIONS OF SALE (FOR GOODS AND SERVICES)

1 INTERPRETATION

1.1 In these conditions of sale the following words will (unless the context otherwise requires) have the following meanings: "Conditions" means the conditions set out below and overleaf."Contract" means any contract between George Fischer and the Customer for the sale of any Works."Customer" means the company, firm, body or person purchasing the Works."Customer's Property" means any dies, tools, patterns, drawings, specifications, designs, packagings and any other equipment, goods, materials, instructions or information supplied by or on behalf of the Customer to George Fischer in connection with the Works."Goods" means any goods agreed in the Contract to be provided by George Fischer to the Customer (including but not limited to the whole or any part or parts of them, any raw materials, finished or semi-finished materials, machinery, parts, spares, commodities and any materials, articles and commodities supplied in connection with the Services)."Services" means any services agreed in the Contract to be provided by George Fischer to the Customer (including but not limited to the whole or any part or parts of them). "Works" means the Goods and/or the Services (as appropriate).

1.2 Any reference in these Conditions to any statute or statutory provision will (unless the context otherwise requires) be construed as a reference to that statute or statutory provision as may be amended, consolidated, modified, extended, re-enacted or replaced from time to time.

1.3 The headings in these Conditions are for reference only and will not affect the interpretation of these Conditions.

1.4 In these Conditions the words "unless otherwise agreed in writing" will mean unless other wise agreed in writing and signed by a director or commercial manager of George Fischer.

1.5 George Fischer reserves the right at anytime to correct any clerical, typographical or other similar errors made by its employees.

2 QUOTATIONS

2.1 Any quotation (whether written or oral) is given on the basis that no contract will come into existence otherwise than in accordance with the provisions of clauses REF _Ref488760478 \n 3.5 and REF _Ref488760491 \n 3.6.

2.2 Unless otherwise agreed in writing any quotation is valid only for a period of 45 days from its date of issue provided that George Fischer has not previously withdrawn it by written or oral notice to the Customer.

2.3 Any quotation is based on the instructions and information provided by the Customer and George Fischer reserves the right to amend the quotation at any time to cover any increase in price which may arise as a result of additional or incomplete instructions or information.

3 APPLICATION OF TERMS

3.1 (Subject to clause REF _Ref515266224 \r \h 3.4) these Conditions are the only conditions on which George Fischer is prepared to deal with the Customer and they will apply to all Contracts to the exclusion of any other terms and conditions including but not limited to those which the Customer purports to apply.

3.2 No terms or conditions endorsed upon, delivered with, referred to or stipulated or contained in any purchase order or other similar document delivered or sent by the Customer to George Fischer will form part of the Contract.

3.3 Any reference overleaf to the Customer's purchase order or other similar document will not be deemed to imply that any terms or conditions endorsed upon, delivered with, referred to or stipulated or contained in such purchase order or other similar document will have effect to the exclusion or amendment of these Conditions.

3.4 Any variation to these Conditions and any representation about the Works will only be effective if it is agreed in writing, contains a specific reference to these Conditions and is signed by a director or commercial manager of both parties.

3.5 Each purchase order for Works issued by the Customer will be deemed to be an offer by the Customer to purchase Works subject to these Conditions.

3.6 No purchase order placed by the Customer will be deemed to be accepted by George Fischer until a written acknowledgement of order is issued by George Fischer or (if earlier) George Fischer commences the Works or supplies the Works to the Customer.

3.7 The Customer must ensure that the content of its order and any applicable specification are complete and accurate.

3.8 Unless otherwise agreed in writing all drawings, illustrations, descriptions, specifications, technical data, advertising and other similar information issued by George Fischer or contained in George Fischer's catalogues, brochures, trade literature, price lists or other similar published materials are is sued or published only for the purpose of giving an approximate idea of the Works described in them and will not form part of the Contract.

3.9 Any purchase order which has been accepted by George Fischer in accordance with clause REF _Ref488760478 \r \h 3.5 and REF_Ref488760491 \r \h 3.6 may only be amended, cancelled, postponed or varied by the Customer with the prior written consent of George Fischer and on terms that the Customer will indemnify George Fischer in full against all losses (including but not limited to loss of profit), costs, damages, charges and expenses incurred (directly or indirectly) by George Fischer as a result of such amendment, cancellation, postponement or variation.

4 DELIVERY

4.1 Any times specified or agreed by George Fischer for the delivery of the Works are given in good faith but are an estimate only. If no time is specified or agreed by George Fischer delivery will take place within a reasonable time. Unless otherwise agreed in writing time for the delivery of the Works will not be of the essence of the Contract.

4.2 George Fischer will use its reasonable endeavours to deliver the Works within the times set out in clause 4.1 but George Fischer will not be liable for the consequences of any delay or failure to deliver if the duration of the delay is not substantial or if the delay or failure is due to any circumstances beyond George Fischer's reasonable control or of an unexpected or exceptional nature.

4.3 (Subject to the provisions of clause REF _Ref488825221 \n 4.4) delivery will be deemed to take place when the Works are delivered to the Customer at such place as the parties may agree except that delivery to a carrier for the purpose of transmission to the Customer will be deemed to be delivery to the Customer and sections 32(2) and (3) of the Sale of Goods Act 1979 will not apply.

4.4 If George Fischer agrees to permit the Customer to collect the Works from George Fischer's place of business then delivery will be deemed to take place when George Fischer notifies the Customer that the Works are ready for collection and unless otherwise agreed in writing the Customer will collect the Works within 3 working days of the issue of such notice.

4.5 George Fischer will use its reasonable endeavours to ensure where necessary that the Works will be packed so as to be adequately protected against damage in normal conditions of transit of usual duration. George Fischer will make such arrangements for the carriage and insurance of the Works as it agrees with the Customer.

4.6 George Fischer may deliver the Works in instalments. Deliveries of further instalments may be withheld until the Works comprised in earlier instalments have been paid for in full. Default by George Fischer (howsoever caused) in respect of one or more instalments will not entitle the Customer to terminate the relevant Contract as a whole.

4.7 In the event of any delay in the delivery of any Goods and/or the performance of any Services which are attributable to the Customer's acts or omissions then:
(a) delivery of the Goods and/or performance of the Services will be deemed to have taken place at the time at which but for such delay or delays such delivery or per mance would have taken place and any extra costs incurred as a result of such delay or delays will be added to the Contract price and will be payable by the Customer; and
(b) George Fischer may sell such Goods 28 days after such delay and deduct any monies payable to George Fischer by the Customer from the sale proceeds and account to the Customer for any excess or charge the Customer for any shortfall.

4.8 Where the Works are to be supplied from stock such supply is subject to the availability of the stock at the date of delivery.

4.9 On delivery to the Customer all Works should be examined. (Subject to clause 8.2) George Fischer will not be liable for any shortages in or non-delivery of the Works (even if caused by George Fischer's negligence) unless the same is notified in writing by the Customer to George Fischer (together with all relevant details) within 14 days of the actual or anticipated date of delivery (as appropriate). Subject to such notice being provided George Fischer will, if it is reasonably satisfied that any Works have not been delivered as a result of George Fischer's fault (in its sole discretion) either arrange for delivery as soon as reasonably possible or give credit (at the pro rata Contract price) to the Customer for such Works. Any shortages in or non-delivery of part of the Works will not affect the Contract in respect of the other parts of the Works.

4.10 If George Fischer complies with clause REF _Ref519060038 \r \h 4.9 it will (subject to clause REF _Ref515268830 \r \h 8.2) have no further liability (in contract, tort (including but not limited to negligence) or otherwise) for such shortages or non-delivery.

4.11 Whilst George Fischer will use reasonable endeavours to supply the exact quantity of the Works ordered by the Customer, George Fischer may supply and the Customer will accept up to 10% more or less than the exact quantity ordered. A pro rata charge or allowance at the Contract price will be made to cover any such variation.

4.12 The Customer (at its own expense) will ensure that the place where delivery of the Goods or performance of the Services is to take place is adequate and appropriate for such delivery or performance and will provide such access, equipment, facilities, protection, manual labour and information as may be required to enable George Fischer to perform its obligations under the Contract.

5 RISK AND OWNERSHIP

5.1 Unless otherwise agreed in writing the Works are at the risk of the Customer from the time of delivery or deemed delivery to the Customer (as appropriate) and loading and off loading (as appropriate) will be at the Customer's risk. Section 20(2) of the Sale of Goods Act 1979 will not apply.

5.2 (Notwithstanding that risk in the Works will pass to the Customer in accordance with the provisions of clause REF _Ref488762748 \n 5.1) ownership of the Works (both legal and equitable) will only pass to the Customer (other than when ownership is properly vested in some other person by the operation of any statute) when George Fischer has received in full (in cash or cleared funds) all monies due to it from the Customer:
(a) in respect of the Works; and
(b) all other sums which are or which become due to George Fischer from the Customer on any account.

5.3 Until ownership of the Works has passed to the Customer under clause REF _Ref488762831 \n 5.2, the Customer will:
(a) hold the Works on a fiduciary basis as George Fischer's bailee;
(b) keep the Works free from any charge, lien or other encumbrance;
(c) store the Works (at no cost to George Fischer) separately from all other materials of the Customer or any third party in such a way that they remain readily identifiable as George Fischer's property;
(d) not destroy, deface or obscure any identifying mark on the Works or their packaging;
(e) maintain the Works in a satisfactory condition, insured on George Fischer's behalf for their full price against all risks to the reasonable satisfaction of George Fischer and on request produce such policy of insurance to George Fischer;
(f) hold all proceeds of the insurance referred to in clause 5.3 REF _Ref515267181 \r \h
(e) on trust for George Fischer and not mix it with any other money or pay the proceeds into any overdrawn bank account; and
(g) not attach the Works to any real property without George Fischer's consent.

5.4 The Customer may resell, use or otherwise dispose of the Works before ownership has passed to it only if any such sale, use or disposition will be effected in the ordinary course of the Customer's business and will be a sale, use or disposition of George Fischer's property on the Customer's own behalf and the Customer will deal as principal.

5.5 George Fischer may while the owner of the Works (and without prejudice to any other rights it may have under or by virtue of these Conditions) demand the immediate return of the Works at any time and the Customer will forthwith comply with such demand and bear the expenses for such return.

5.6 The Customer grants to George Fischer (or its successors in title for the Works) and their respective employees and agents an irrevocable licence to enter at any time any premises where the Works are or may be situated for the purpose of inspecting or removing any such Works the ownership in which has remained with George Fischer.

5.7 George Fischer will be entitled to recover payment for the Works notwithstanding that ownership of any of the Works has not passed from George Fischer.

5.8 The Works will be deemed sold or used in the order delivered to the Customer.

6 PRICE AND PAYMENT

6.1 The price stated in the Contract is based on the cost to George Fischer of materials, fuel, power, transport, taxes, duties, services, labour and all other costs at the date of George Fischer's quotation, acknowledgement of order or supply (whichever is earlier). If at the date of delivery or deemed delivery of the Works there has been any increase in all or any of such costs, the price payable for the Works may be increased by George Fischer accordingly.

6.2 Quotations given in a currency other than sterling are based on the rate of exchange at the time of quoting and (unless otherwise agreed in writing between the parties) the price may be subject to revision if any different rate of exchange is ruling at the date of invoice.

6.3 (Unless otherwise agreed) the price for the Works is exclusive of any value added tax (and any other tax or duty relating to the manufacture, transportation, sale or delivery of the Works) and any costs or charges in relation to export and/or import, packaging, loading, unloading, carriage and insurance. Such costs and expenses will be paid by the Customer in addition to the price for the Works at the same time that it is due to pay for the Works.

6.4 Where George Fischer agrees (in its discretion) to bring forward the date of delivery of the Works at the Customer's request any overtime or other additional costs reasonably incurred by George Fischer shall be charged to the Customer in addition to the Contract price.

6.5 George Fischer may invoice the Customer for the Works at any time after the delivery of the Works or the delivery of any instalment (as appropriate). If any delivery is postponed at the request or by the default of the Customer then George Fischer may submit its invoice at any time after the Works are ready for delivery or would have been ready in the ordinary course but for the request or default on the part of the Customer.

6.6 Customers who have been granted by George Fischer (in its sole discretion) a credit account facility will pay the price within 30 days of the end of the month in which the Works are des patched. George Fischer may (in its sole discretion) amend the terms of or withdraw such credit account facility at any time without notice with immediate effect and on such withdrawal all amounts due or accruing to George Fischer under the Contract will become immediately payable despite any other provision of these Conditions.

6.7 Customers who have not been granted a credit account facility will pay the price 5 working days prior to delivery of the Works.

6.8 No payment will be deemed to have been received until George Fischer has received cleared funds.

6.9 Time for payment will be of the essence of the Contract and the Customer will indemnify George Fischer against all expenses and legal costs incurred by George Fischer in recovering overdue amounts.

6.10 All payments payable to George Fischer under the Contract will become due immediately on termination of this Contract despite any other provision of these Conditions.

6.11 The Customer will make all payments due under the Contract without any deduction whether by way of set-off, counterclaim, discount, abatement or otherwise unless the Customer has a valid court order requiring an amount equal to such deduction to be paid by George Fischer to the Customer.

6.12 If the Customer fails to pay George Fischer any sum due pursuant to the Contract the Customer will be liable to pay interest to George Fischer on such sum from the due date for payment at an annual rate of 4% above the base lending rate of HSBC Bank plc from time to time accruing on a daily basis until payment is made in full (whether before or after any judgement). In the alternative, George Fischer in is absolute discretion, reserves the right to claim interest and compensation payments under the Late Payment of Commercial Debts (Interest) Act 1998.

6.13 Without prejudice to the provisions of clause REF _Ref515268302 \r \h 6.12 if the Customer fails or George Fischer reasonably believes that the Customer will fail to pay for the Work when due George Fischer may demand payment of all outstanding balances whether due or not, treat the Contract as repudiated by the Customer or suspend any future performance of the Contract or any other contract with the Customer until all overdue sums have been paid.

7 QUALITY

7.1 George Fischer warrants (subject to the provisions of this clause REF _Ref515268367 \r \h 7) that:
(a) on delivery of the Goods and for a period of 12 months from the date of delivery, the Goods will:
(i) be of satisfactory quality, within the meaning of the Sale of Goods Act 1979 (as amended); and
(ii) be reasonably fit for any particular purpose for which the Works are commonly supplied or are being bought (if the Customer has made known that purpose to George Fischer in writing and George Fischer has confirmed in writing that it is reasonable for the Customer to rely on the skill and judgement of George Fischer);
(b) and the Services will be performed with reasonable skill and care by properly qualified and experienced persons.

7.2 George Fischer will not be liable for any breach of any of the warranties in clause REF _Ref515268792 \r \h 7.1 unless:
(a) the Customer gives written notice of the defect to George Fischer within 28 days of the date when the Customer discovers or ought reasonably to have discovered the defect;
(b) (if the defect is as a result of damage in transit) the Customer gives written notice of the defect to the carrier in the manner and within the appropriate time limit as set out in the carrier's terms of business; and George Fischer is given a reasonable opportunity after receiving such notice to examine such Works and the Customer (if requested to do so by George Fischer) returns such Works to George Fischer's place of business (at the Customer's cost) for the examination to take place there.

7.3 George Fischer will not be liable for a breach of any of the warranties in clause 7.1 where and to the extent that:
(a) the defect arises from the Customer's Property or as a result of the Customer's negligence;
(b) the defect arises as a result of fair wear and tear, misuse, wilful damage, or abnormal working conditions;
(c) the defect arises as a result of any parts, materials or equipment not manufactured or workmanship not performed by George Fischer;
(d) the Customer makes any further use of such Works after giving written notice of the defect;
(e) the defect arises because the Customer has failed to follow George Fischer's instructions (whether oral or in writing) as to the storage, assembly, installation, commissioning, use, processing, handling or maintenance of the Works or (if there are none) good trade practice;
(f) the defect arises as a result of any installation, testing or commissioning of the Works performed by the Customer or any third party; or
(g) the defect arises as a result of any alteration, servicing or repair of the Works not made by George Fischer and without the written consent of George Fischer.

7.4 (Subject to clauses REF _Ref80676410 \r \h 7.2 and REF _Ref80676434 \r \h 7.3) if any of the Works do not confirm with any of the warranties set out in clause REF _Ref515268792 \r \h 7.1 George Fischer will at its option and cost repair or replace such Goods (or the defective part), re-perform such Services or refund the price of such Works at the pro rata Contract rate.

7.5 If George Fischer complies with clause REF _Ref515268814 \r \h 7.4 it will (subject to clause REF _Ref515268830 \r \h 8.2) have no further liability (in contract, tort (including but not limited to negligence) or otherwise) for breach of any of the warranties in clause REF _Ref515268792 \r \h 7.1 in respect of such Works.

7.6 Any Goods replaced by George Fischer in accordance with the provisions of clause REF _Ref515268814 \r \h 7.4 will belong to George Fischer and any repaired or replacement Goods will be guaranteed on these terms for the unexpired portion of the original 12 month warranty period.

8 LIMITATION OF LIABILITY

THE PRICES CHARGED FOR THE WORKS ARE BASED STRICTLY ON THE UNDERSTANDING OF ACCEPTANCE BY THE CUSTOMER OF THE PROVISIONS IN THE CONTRACT FOR THE LIMITATION OF GEORGE FISCHER'S LIABILITY. SHOULD THE CUSTOMER WISH GEORGE FISCHER TO ACCEPT ADDITIONAL LIABILITY THIS MAY BE DISCUSSED BETWEEN THE PARTIES AND THE PRICE MAY BE INCREASED ACCORDINGLY.

8.1 All warranties, conditions and other terms implied by statute or common law (except for the conditions implied by section 12 of the Sale of Goods Act 1979 and section 2 of the Supply of Goods and Services Act 1982) are, to the fullest extent permitted by law, excluded from the Contract.

8.2 Nothing in these Conditions excludes or limits the liability of George Fischer for fraudulent misrepresentation or for any death or personal injury caused by George Fischer's negligence or for any breach of the conditions implied by section 12 of the Sale of Goods Act 1979 and sec tion 2 of the Supply of Goods and Services Act 1982.
THE CUSTOMER'S ATTENTION IS IN PARTICULAR DRAWN TO THE PROVISIONS OF CLAUSES REF _Ref515268901 \r \h 8.3 AND REF _Ref515268903 \r \h 8.4

8.3 (Subject to clause REF _Ref515268930 \r \h 8.1 and REF _Ref515268830 \r \h 8.2) George Fischer will not be liable to the Customer in contract, tort (including but not limited to negligence), misrepresentation or otherwise for any:
(a) economic loss of any kind (including but not limited to direct or indirect loss of profit, business, contracts, revenue or anticipated savings):
(b) damage to the Customer's reputation or goodwill:
(c) product recall costs; or
(d) any special, indirect or consequential loss or damage (even if George Fischer has been advised of such loss or damage) arising out of or in connection with the Contract.

8.4 (Subject to the provisions of clause REF _Ref515268830 \r \h 8.2 and REF _Ref515268901 \r \h

8.3 George Fischer's total liability in contract, tort (including but not limited to negligence), misrepresentation or otherwise arising out of or in connection with the Contract will be limited to the Contract price.

9 THE CUSTOMER'S PROPERTY

9.1 While George Fischer will take reasonable care of the Customer's Property whilst it is in George Fischer's possession, control or custody the Customer's Property will (unless otherwise agreed in writing) remain at the Customer's risk and all replacements and alterations of and repairs to the Customer's Property will be the Customer's responsibility.

9.2 George Fischer will not be liable for any loss or damage to the Customer's Property unless such loss or damage arises as a direct result of George Fischer's negligence. Where George Fischer is liable under this clause REF _Ref515269116 \r \h 9.2 George Fischer's liability to the Customer will be limited to the actual cost of the replacement or repair of the loss or damage to the Customer's Property.

9.3 The Customer will ensure that the Customer's Property is in good condition and suitable for use by George Fischer in the performance of the Contract and while George Fischer will use reasonable endeavours to verify any relevant aspects of the Customer's Property no responsibility is accepted by George Fischer for its accuracy.

9.4 Any defect in the Works which is due in whole or in part to the Customer's Property will not entitle the Customer to terminate the Contract, reject the Works, make any deductions from the Contract price or claim damages in respect of such defect.

9.5 The Customer will keep George Fischer indemnified in full against all liability, loss, damage, injury, claim, action, demand, expense or proceeding awarded against or incurred by George Fischer as a result of or in connection with the use by George Fischer of the Customer's Property unless such liability, loss, damage, injury, claim, action, demand, expense or proceeding is the result of George Fischer's negligent acts or omissions.

10 TOLERANCES AND TESTS

10.1 Unless otherwise agreed in writing gauges, weights, chemical composition and analysis, quantities and sizes will, so far as possible, be adhered to but reasonable excesses and deficiencies will be accepted by the Customer, who will not be entitled to reject any Works on the ground that they are not precisely as specified.

10.2 Unless otherwise agreed in writing, all tests, test pieces and inspections required by the Customer and agreed by George Fischer will be charged extra. All tests and inspections will take place under George Fischer's standard testing arrangements, and such tests will be final (except in the case of manifest error). All tests are subject to analytical tolerances.

10.3 The Customer may attend (at its own cost) all tests provided that it notifies George Fischer in writing of its intention to do so. The Customer will then be given not less than 5 working day's prior notice of the proposed date and time of any test and, if the Customer fails to attend, the test will proceed in its absence although it will be deemed to have been made in its presence.

11 OWNERSHIP OF TOOLING

11.1 Where patterns, dies, tools, drawings and equipment are not supplied by the Customer, only those which are specially made by George Fischer and separately charged to the Customer in full, will, when paid for by the Customer, become the property of the Customer.

11.2 George Fischer reserves the right to destroy or otherwise dispose of patterns, dies, tools, drawings and equipment in its possession, control or custody (whether or not the property of the Customer) from which the Customer has not required any Works to be made for a period of 12 months or more.

12 PACKING CASES AND PACKING MATERIALS

12.1 Unless otherwise agreed in writing packing cases and packing materials will not be charged extra but, where stated to be returnable, will be returned to George Fischer in good condition, within one month of receipt by the Customer. Where not returnable, the Customer will dispose of all packing in accordance with all regulations (whether statutory or otherwise) relating to the protection of the environment.

13 CONFIDENTIALITY

13.1 The Customer will keep confidential all technical data, commercial information, know how, specifications, inventions, processes, initiatives and other information which is of a confidential nature and which has been disclosed to the Customer by George Fischer and/or any member of the George Fischer group and/or its agents and any other confidential information concerning the business of George Fischer and/or any member of the George Fischer group or its products which the Customer may obtain ("Confidential Information").

13.2 The Customer will restrict disclosure of the Confidential Information to such of its employees, agents or subcontractors as need to know the same and will ensure that such employees, agents or subcontractors are subject to equivalent obligations of confidentiality as bind the Customer.

13.3 The Customer will not without the prior written consent of George Fischer publish or disclose the Confidential Information to any third party or make any use of the Confidential Information except to the extent necessary to implement the Contract.

14 INTELLECTUAL PROPERTY

14.1 The Customer will keep George Fischer indemnified in full against all liability, loss, damage, injury, claim, action, demand, expense or proceeding in respect of any infringement or alleged infringement of any patent, registered design, unregistered design, design copyright, trademark or other industrial or intellectual property rights resulting from any use by George Fischer of the Customer's Property or any compliance by George Fischer with the Customer's instructions, whether express or implied.

14.2 (Unless otherwise agreed in writing) ownership in all intellectual property rights subsisting in, resulting from or relating to the Works or any associated plans, descriptions, blue prints, designs, technical information, drawings, documents or specifications (except where these relate solely to the Customer's Property) will vest in or be assigned to George Fischer. If the Customer in any way acquires any such rights it will promptly inform George Fischer and take such steps as George Fischer may reasonably require to assign such rights or vest such title in George Fischer.

14.3 Nothing in these Conditions will be construed as any representation or warranty by George Fischer that the design, manufacture, use or sale of the Works is not an infringement of any third party intellectual property rights.

15 TERMINATION

15.1 George Fischer may terminate the Contract (and all other contracts between George Fischer and the Customer) immediately if:
(a) the Customer fails to pay the price on the due date;
(b) the Customer is in breach of any term of the Contract and has failed to remedy such breach within 28 days of receipt of written notice specifying the breach and requiring it to be remedied;
(c) there is a material change in the ownership or control of the Customer; or
(d) the Customer is wound up or becomes insolvent or has a receiver or administrative receiver appointed or suffers the appointment or the presentation of a petition for the appointment of an administration or any equivalent or analogous event occurs in any relevant jurisdiction.

15.2 The termination of the Contract (howsoever arising) will be without prejudice to any rights and remedies which may have accrued to either party.

15.3 Any Conditions which impliedly have effect after termination or expiry will continue to be enforceable notwithstanding termination or expiry.

16 EXPORT SALES

16.1 Where the Works are supplied for export from the United Kingdom the provisions of this clause REF _Ref515269501 \r \h 16 will (subject to any special terms agreed in writing between the parties) apply despite any other provision of these Conditions.

16.2 The Uniform Laws on International Sales Act 1967 will not apply.

16.3 Unless otherwise agreed in writing the currency will be pounds sterling. The Customer will establish and maintain in favour of George Fischer an irrevocable and confirmed letter of credit in English with a UK clearing bank payable on drafts drawn at sight on presentation to the bank by George Fischer of a certified copy of George Fischer's invoice. All bank charges and other expenses in relation to the letter of credit will be borne by the Customer.

16.4 Unless otherwise agreed in writing Works will be sold C.I.F (as defined in INCOTERMS 2000 Edition).

16.5 The Customer will be responsible for complying with and shall comply with any legislation or regulation governing the export of the Works:
(a) from the United Kingdom; and/or
(b) (where the Works are sourced from a country other than the United Kingdom) from such c country and the importation of the Works into the country of destination and for payment of any relevant duties or taxes whether payable by the Customer or George Fischer.

16.6 Unless otherwise agreed in writing packing cases and packing materials will be charged extra but, where stated to be returnable, will be credited in full on return to George Fischer's place of business (carriage paid) in good condition, within one month of receipt by the Customer. Where not returnable, the Customer will dispose of all packing in accordance with all regulations (whether statutory or otherwise) relating to the protection of the environment.

17 LIEN

George Fischer will have in respect of unpaid debts due to it from the Customer a general lien on all property of the Customer which is in George Fischer's possession for whatever reason and whether worked upon or not.

18 ASSIGNMENT AND SUBCONTRACTING

18.1 The Customer will not without the prior written consent of George Fischer assign or transfer the Contract or any part of it to any other person.
George Fischer may without the prior written consent of the Customer assign, transfer or subcontract the Contract or any part of it to any other person.

19 GENERAL

19.1 Each right or remedy of George Fischer under these Conditions is without prejudice to any other right or remedy which George Fischer may have under these Conditions or otherwise.

19.2 Any notice or document shall be deemed served, if delivered by hand, at the time of delivery, if posted, 48 hours after posting and if sent by facsimile transmission, at the time of trans mission. George Fischer may also send a notice or document by electronic communication in an e-mail address notified to George Fischer by the Customer. Such notice or document shall be deemed served if sent by e-mail transmission 48 hours after the time of transmission.

19.3 The illegality, invalidity or unenforceability of any provision of these Conditions will not affect the legality, validity or unenforceability of any other provisions of these Conditions.

19.4 Failure or delay by either party in exercising any right or remedy provided by the Contract or by law will not be construed as a waiver of such right or remedy or a waiver of any other right or remedy.

19.5 A person who is not a party to the Contract will have no right under the Contracts (Rights of Third Parties) Act 1999 to enforce any term of the Contract. This clause REF _Ref515269598 \r \h 19.5 does not affect any right or remedy of any person which exists or is available otherwise than pursuant to that Act.

19.6 The Customer agrees that it will have no remedy in respect of any untrue statement innocently or negligently made by or on behalf of George Fischer prior to the Contract upon which the Customer relied in entering into the Contract whether such statement was made orally or in writing unless the statement has been expressly agreed in writing by a director of George Fischer and/or the statement has been expressly incorporated in writing into the Contract.

19.7 George Fischer shall not be in breach of these Conditions or otherwise liable to the Customer by reason of any delay in performance or non-performance of any of its obligations due to any circumstances outside George Fischer's reasonable control.

19.8 The Contract will be governed by English law and the parties submit to the non-exclusive jurisdiction of the English courts.
